YOUR BEST WORK YET NEEDS YOUR TOTAL FOCUS

The safety and productivity of every professional worker is our goal. Our mission is to design products that deliver on this goal. We are always finding better ways to help increase worker productivity and safety.

Every day, hundreds of professional workers are injured at work—industrial accidents are avoidable.

Our goal is to ensure that you return home after a safe and productive day at work in the same healthy condition as you went to work.

Legislation and regulation continue to increase safety at work, and all of our products will meet or exceed the necessary levels.

We will also work to ensure that all of our distributors receive product knowledge training to ensure they provide the right product for the right application. We are committed to understanding the needs of the professional end users.

When workers are confident that their PPE is designed with their health and safety in mind, they can concentrate on the job at hand, achieving maximum productivity.

JACKSON® SAFETY

EXCLUSIVE!

370™ SPEED DIAL

The World's Greatest Ratcheting Headgear System—Period!

Our patented Jackson Safety® **370 Speed Dial™** offers the fastest, easiest, and most efficient ratcheting headgear system in the industry today! The 370 Speed Dial™ incorporates two unique designs—an oversized ratcheting adjuster knob, and a patented "quick-fit" rear headband that swivels up and down. Together, these two features combine to achieve a perfect fit every time, increasing safety, productivity and satisfaction. Try any of our industry-leading Jackson Safety® products that incorporate our famous 370 Speed Dial™ and experience the difference yourself!

QUAD™ 500 FACE SHIELDS— SUPREME MULTI-PURPOSE

NEW!

Quad™ 500 Multi-Purpose Face Shield System

- Jackson Safety® introduces the all new Quad 500 multi-purpose face shield, our premium face protection product
- The Quad 500 offers an unparalleled range of face and eye protection solutions for almost every application including grinding, cutting, oxy/acetylene cutting, plasma cutting, and brazing
- All Quad 500 products have been designed to offer maximum above-the-neck face protection, including an extra-large molded polycarbonate window featuring our premium Sta-Clear® anti-fog coating
- For added protection, the molded window is completely framed on the sides and chin and features an extra-large crown
- The Quad 500 offers exceptional panoramic views with virtually no distortion

Featuring the exclusive Jackson Safety® 370 Speed Dial™ ratcheting headgear system!

- The Quad 500 features the Jackson Safety® 370 Speed Dial™ ratcheting headgear system—an industry best!
- The 370 Speed Dial™ is highlighted by Jackson's famous "Easy Grab-Easy Turn" oversized adjusting dial and patented swivel adjuster band, achieving maximum comfort and fit quickly, easily, and conveniently—saves time, increases productivity, and improves worker safety!

370™ SPEED DIAL

Available with optional flip-up/flip-down extra-large IR window

- The Quad 500 face shield is also available with an exclusive, extra-large flip-up/flip-down IR window for added eye protection when used in applications producing infrared hazards
- It's easy and safe—by keeping the Quad 500 clear window in the down position at all times, the operator can flip the IR shaded window up or down, providing uninterrupted face protection during cutting and grinding operations
- Flip windows available in:
  - **Shade 5 IR** for oxy/acetylene cutting, brazing, and plasma cutting
  - **Shade 8 IR** for oxy/acetylene welding and plasma cutting
- Both the clear and flip windows feature detents that lock in both the up and down positions
- Designed to be used with most goggles, respirators, and all safety glasses
- Two available mounting options:
  - Complete with Jackson Safety's premium 370 Speed Dial™ ratcheting headgear suspension
  - For mounting on slotted hard hats, assembled with Jackson Safety's exclusive HHIS slot adaptors
- All models meet or exceed **ANSI Z87.1+ high impact** standards
- Models 14220, 14230, 14233, 14235 **CSA certified to CAN/CSA Z94.3** standards
- Models 14220, 14230, 14233 **CE certified**

DP4 FACE SHIELDS— PREMIUM MULTI-PURPOSE

S32010

DP4 Multi-Purpose Face Shield System

- Sellstrom's exclusive multi-purpose DP4 face shield system has been an industry leader for more than 15 years
- The DP4 offers an incredible range of face protection solutions

DP4 Face Shield Only

- As a standard face shield, the DP4's specially designed molded polycarbonate window curves naturally to fit facial contours
- Offers exceptional panoramic views with virtually no distortion
- Window meets high-impact standards and is chemical resistant
- Available in three full-sized window options: clear anti-fog (S32010), Shade 3 IR (S32030) or Shade 5 IR (S32050)
- Standard DP4 face shields feature a premium ratcheting headgear for maximum operator comfort and convenience
- Model S32261 **CSA certified**

FACE SHIELDS—PREMIUM MULTI-PURPOSE

DP4 Face Shield with Flip-Up/Flip-Down IR Windows

- The DP4 face shield is also available featuring a unique spring-mounted flip-up/flip-down IR window (4.375" x 9.25" x .070")
- It's easy and safe—by keeping the full size DP4 clear window in the down position at all times, the operator can flip the spring-mounted IR Shaded window up or down, providing uninterrupted face protection during cutting and grinding operations
- Flip visor available in:
  - **Shade 5** IR for: oxy/acetylene cutting, brazing and plasma cutting
  - **Shade 6** IR for: oxy/acetylene cutting, brazing and plasma cutting
  - **Shade 8** IR for: oxy/acetylene welding and plasma cutting
  - **Shade 6B Cobalt Blue** for: oxy/acetylene welding of aluminum and cast iron, in metal and glass furnace foundry work
  - Cobalt Blue diffuses the orange glow associated with the sodium in molten metal and glass
- DP4 multi-purpose face shields are available in two mounting options: premium ratcheting headgear suspension or exclusive universal slot adaptors (for mounting on slotted hard hats)

DP4 Face Shields Now Available With Optional Chin Guard

- All DP4 face shields can be fitted with optional chin guard (S32200) for added below-the-neck protection during cutting and grinding operations
- DP4 Face shields can be ordered with the chin guard included, or if you already own a DP4 face shield, the chin guard can be ordered separately and easily attached by the operator

DP4 Safety Standards

- All models meet or exceed **ANSI Z87.1+ high impact** standards
- Models S32010, S32151, S32181, S32251, S32281 **CSA certified to CAN/CSA Z94.3** standards
- Model S32010 **CE certified**

MAXVIEW™ FACE SHIELDS— PREMIUM

NEW!

Maxview™ Face Shield System

- Jackson Safety® introduces the all new Maxview face shield, a premium face protection product
- The Maxview is designed to offer maximum face protection coverage, incorporating an extra-large clear polycarbonate window that is available in two options: without anti-fog treatment or with our premium Sta-Clear® anti-fog coating
- The high-impact PC window is then framed on the side and chin areas and features an extra-large crown
- This combination translates into maximum coverage, head to lower neck, and side to side. In fact, Maxview offers a full 1" of extra window protection on each side (2" total) versus the leading face shield model, ensuring best-in-class protection and exceptional panoramic views. Check and compare!
- Given its amazing coverage and viewing area, the Maxview is incredibly light
- Maxview incorporates engineered detents that lock in both the up and down positions
- Designed to be used with most goggles, respirators, and all safety glasses
- Two available mounting options:
  - Complete with Jackson Safety's premium 370 Speed Dial™ ratcheting headgear suspension
  - For mounting on slotted hard hats, assembled with Jackson Safety's exclusive HHIS slot adaptors

Featuring the exclusive Jackson Safety® 370 Speed Dial™ ratcheting headgear system!

- The Maxview face shield features the Jackson Safety® 370 Speed Dial™ ratcheting headgear system—an industry best!
- The 370 Speed Dial™ is highlighted by Jackson's famous "Easy Grab-Easy Turn" oversized adjusting dial and patented swivel adjuster band, achieving maximum comfort and fit quickly, easily, and conveniently—saves time, increases productivity, and improves worker safety!

370™ SPEED DIAL

- All models meet or exceed **ANSI Z87.1+ high impact** standards
- Models 14200, 14201 **CSA certified to CAN/CSA Z94.3** standards
- Models 14200, 14201 **CE certified**

312 FACE SHIELDS— PREMIUM ARC FLASH RATED

S31200

312 Series Arc Flash Rated Face Shields

ARCFLASH™

- Sellstrom Arc Flash-rated face shields provide protection from low level arc flash hazards
- Arc flash is created by an electric arc and can result in an explosive condition releasing electromagnetic energy, fragments and molten metals that can cause serious injury
- Sellstrom Arc Flash face shields feature a unique, molded high-impact and splash resistant polycarbonate window
- Provides optimum clarity with no distortion and panoramic vision
- Specially formulated window incorporates a light green tinted window that allows 55% light transmittance and true color optics
- These true color optics allow the operator to see all colors perfectly. This is critical when working around color coded wiring in electrical applications
- Two window versions: 9.9 Cal/cm² and 12 Cal/cm² ATPV rating
- Face shield curves naturally to fit facial contours, providing superior protection
- Available with or without hard hat, with a dielectric hard hat adaptor

312 Standards

- All product meets **ANSI Z87.1+ high-impact** standards, tested and certified to **ASTM F-2178** specifications and **NFPA 70E-2009** standards

JACKSON® SAFETY

sellstrom®

THE WORLD'S MOST COMPREHENSIVE UNIVERSAL MOUNT FACE SHIELD SYSTEM!

That's right! **Jackson Safety®** and **Sellstrom®**, two of the oldest safety brands in America, have joined forces to offer the most comprehensive universal mount face shield program anywhere! Whatever the job, we've got the perfect solution. Check out the next few pages and see for yourself. Our wide range of mounting options include four models of universal mount ratcheting headgear crowns, not the least of which is our new **F4XP**, featuring Jackson's world-famous **370 Speed Dial™** "comfort fit" headgear. The F4XP is simply the best, most comfortable face shield crown—period! From there, we offer over 15 models of universal mount hard hat face shield brackets, including Jackson's famous **Hard Hat Interchange System** face shield kit, and finally, our range of universal mount face shield windows includes the widest range of shapes, sizes and types under one roof. When you put it all together, there are hundreds of available options and solutions for you to choose from.

S61970	Universal Slotted Hard Hat Adaptor	DP4, 280, 290, 380, 390 Series

EXCLUSIVE!

Hard Hat Interchange System

The All-In-One Safety Solution. Injuries can happen in a split second. Now it's easy to stay protected with the Jackson Safety® Hard Hat Interchange System. It lets you add, remove, or switch between your face shield or welding helmet, without removing your head protection.

In accordance with ANSI Z87.1, the system was designed to protect against multiple combinations of hazards. Remain safe, productive, and compliant with the Hard Hat Interchange System. It's worker preferred and safety manager enforced.

- Quickly switch between face shields and welding helmets without removing hard hats
- Meets ANSI standards when PPE products are used separately or combined
- Hear the audible click—Know your PPE is assembled correctly without the need for visual inspection
- One-button action provides quick release
- Vertical lock-in eliminates the annoyance of helmet creep
- HHIS headgear system comes fully assembled and ready to use
- Made from lightweight polypropylene
- Dielectric—Keeps your hard hat Class E rated!

HHIS Mounting Blades

FACE SHIELDS—UNIVERSAL PIN MOUNT WINDOWS/VISORS

- Used in conjunction with protective eyewear, Jackson Safety® face shields provide a high degree of on-the-job protection for heat applications as well as grinding, flying debris, splash protection, and more
- All Jackson Safety® face shields meet **ANSI Z87.1** Standards when used with any Jackson Safety® headgear (except for #28765)
- Universal bracket pin pattern is designed to accommodate most universal window brands including Kedman, Crews, Wilson, North, Jackson, and Sellstrom

F60	Wire Face Shields
F50	Polycarbonate Special Face Shields
F40	Propionate Face Shields
F30	Acetate Face Shields
F20	Polycarbonate Face Shields
F10	PETG Face Shields

MATERIAL TYPES

PETG
- A low-cost, recyclable option, ideal for general debris and splash protection

Polycarbonate
- Premium impact protection
- Good performance against heat
- Excellent cold flexibility
- Excellent clarity

Acetate
- Robust combination of weight and strength
- Excellent cold flexibility
- Scratch and chemical resistant
- Optimum clarity

Propionate
- Lightweight and chemical resistant

Wire Mesh
- Wear with face shield to dissipate heat
- Ideal for flying-debris applications
- Air flow for comfort

LENS TINTS

Clear
Allows for maximum visible-light transmission.

IRUV
Worn for applications and in environments where others are performing welding tasks such as torch brazing, torch soldering, gas welding, and oxygen cutting. Available in Shades 3.0 and 5.0.

SPECIAL TINTS
Enhances vision and reduces glare by blocking light transmission. Available in light, medium, and dark green tints, as well as aluminum, copper, and gold coated to deflect heat in high-heat applications.

WARNING: APPLICATIONS & SAFETY
Face shields do not provide unlimited eye and face protection—primary eye protection (safety eyewear or goggles) must be worn.

Optional Magnetic Hooks for Hanging Face Shields in Monitor Cabinet—NEW!

- Allows use of Monitor 2000 germicidal cabinet to sanitize face shields instead of glasses and goggles
- Set of four magnetic hooks allows sanitization of up to four face shields during the five-minute cycle time
- It's easy—simply remove the glasses and goggle rack from the Monitor 2000
- Space the four magnetic hooks in a pattern that allows up to four face shields to fit inside the cabinet
- Four magnetic brackets are designed to mount on the metal back wall of the cabinet
- Hang the face shields, close the door, set the timer, and after five minutes, away you go!
- Option expands the range of products that can be sanitized to include safety glasses, goggles, and now face shields
- The following Jackson and Sellstrom face shields have been tested and certified with the Monitor 2000 cabinet, effectively killing 99.4+% of germs:
  - Jackson Quad 500, Maxview, F4XP, MFS320, 14955, 14957
  - Sellstrom 301, 303, 380, 390, and DP4 Series

16-Gallon Portable Eyewash Station

EMERGENCY EYEWASH

- The proper selection of emergency eyewash stations is critical when operating a safe working environment
- OSHA regulations listed in 29 CFR outline where and when eyewash equipment must be installed
- ANSI Z358.1 (Emergency Eyewash and Shower Equipment) is the standard that outlines the proper design, performance, and installation of emergency equipment to comply with the OSHA standard
- Sellstrom offers a wide range of emergency eyewash solutions, all of which are designed to meet the ANSI standards

S90306

EYEWASH STATIONS—PORTABLE EMERGENCY

Gravit-Eye 6-Gallon Portable (Personal) Gravity Feed Eyewash Station

- Six-gallon, gravity-flow personal portable eyewash station
- Ideal as a portable, first response eyewash solution
- Water stream is activated by removing the water retaining strap
- Water is fed through dual spray heads for maximum effectiveness
- 3' drain hose directs waste water into floor drain or storage tank
- Furnished with epoxy coated steel wall mounting bracket
- Can also be placed on flat surfaces such as counter tops
- Comes with 8 oz. bottle of bacteriostatic additive (S90322), which protects against growth of bacteria, fungus, algae and acanthamoeba
- Weight: 9.5 lbs. empty
- Complies with **ANSI Z358.1** for portable personal eyewash stations

HEARING PROTECTION
SOME SOUND ADVICE

JACKSON® SAFETY

20774

67212

67220

S23410

S23403

HEARING PROTECTION

What You Should Know About Hearing Protection!

- Exposure to continuous high noise levels causes irreversible hearing loss
- Developing an effective workplace hearing safety program is critical
- OSHA sets the permissible eight-hour work day noise exposure level at 90 dBA and only two hours of exposure to 100 dBA
- Many companies place noise level limits even lower than the OSHA standard
- Here are guidelines that some companies apply for increased safety
  - 8 hours exposure = 85 dBA
  - 4 hours exposure = 88 dBA
  - 2 hours exposure = 91 dBA
  - 1 hour exposure = 94 dBA

About NRR Ratings and Their Practical Application in the Field

- The NRR ratings found on many hearing protection products in the market, including Jackson and Sellstrom, have been tested and certified in controlled laboratories
- However, working environments are seldom controlled environments
- In the field, hearing protection is not always fitted properly, leading to noise creep and the potential for hearing damage
- As a precaution, NIOSH recommends the following deratings during field use:
  - Ear Muffs—NIOSH recommends derating NRR ratings by 25%
  - Earplugs—NIOSH recommends derating NRR ratings by 50–75%
- In some applications, to achieve maximum protection, the use of earplugs and muffs together may be the safest solution. It is estimated that by combining the two, an extra 5 dBs can be added to the overall tested NRR rating

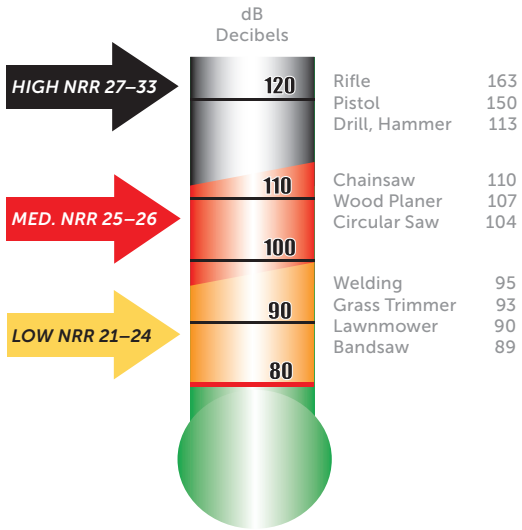
What Level of Protection Do You Need?

All hearing protectors sold by Jackson Safety and Sellstrom are tested to the American National Standards Institute (ANSI) S3.19-1974 Standard to receive a Noise Reduction Rating (NRR), which is labeled on all such products as required by the U.S. Environmental Protection Agency (EPA).

This number gives the consumer a method to judge performance among different models of hearing protectors–a higher NRR indicating more effective protection against sound. Some models of hearing protectors have multiple NRR numbers. This reflects the fact that these hearing protectors may be worn with their headbands in different positions.

Hearing Loss is Forever—Take Prevention Seriously!

Hearing protection should be taken very seriously and protectors, either muffs or plugs, should be comfortable to wear and offer sufficient attenuation to prevent hearing loss based on individual protection needed.



EARPLUGS—PREMIUM DISPOSABLE

Disposable Earplugs—Bullet Shape

- Contoured bullet shape premium quality polyurethane earplugs
- Gently but quickly expands to fit ear canal—one size fits all!
- Soft, non-irritating PU foam for maximum comfort

EARPLUGS—PREMIUM BANDED

sellstrom®

Banded Earplugs

- Banded earplugs are designed to wear around the neck when not in use
- Ensures workers always have quality hearing protection when required
- Ideal for regular and intermittent applications—easily installed or removed
- Compliance enforcement is made easy due to the Hi-Vis green band
- Specially designed band shape is curved at the plug end—keeps the ear pods up and away from dirty and contaminated surfaces when not in use
- Comfortable blue earplugs/pods are easily replaced when dirty (S23431)
- Used extensively on construction work sites, at airports and race tracks, in factory and shop applications, and wherever reusable ear protection is required
- Independently tested/certified to **NRR 25 (ANSI S3.19)**
- **CSA Class AL**

Hard hat customization now available on fully automated equipment.

Types & Class Standards

Protective hard hats are classified according to the specific impact and electrical performance requirements they are designed to meet. All protective hard hats in accordance with this standard shall meet Type I impact requirements. In addition, all hard hats are further classified as meeting Class C, Class G, or Class E electrical requirements.

Impact Types

Type I: Hard hats intended to reduce the force of impact resulting from a blow only to the top of the head.

Type II: Hard hats intended to reduce the force of impact resulting from a blow which may receive limited protection odd center, lateral, or to the top of the head.

Electrical Classes

Class C (Conductive): Class C hard hats are not intended to provide protection against contact with electrical conductors.

Class G (General): Class G hard hats are intended to reduce the danger of contact exposure to low-voltage conductors. test samples are proof-tested at 2,200 volts (phase to ground). However, this voltage is not as an indication of the voltage at which the hard hat protects the wearer.

Class E (Electrical): Class E hard hats are intended to reduce the danger of exposure to higher-voltage conductors. Test samples are proof-tested at 20,000 volts (phase to ground). However, this voltage is not intended as an indication of the voltage at which the hard hat protects the wearer.

Optional Standards

Reverse Donning: Reverse-wearing option hard hats must pass force transmission requirements whether they are worn facing frontward or backwards in accordance with the manufacturer's wearing instructions.

HEAD PROTECTION—BUMP CAPS

(14809-14816)

It's as Easy as 1, 2, 3!

1
Order Jackson Safety's C10 bump cap with face shield adaptor
(20186-20192)

2
Attach our new Jackson Safety 8" x 15.5" x .035" Shape E/N face shield window with **anti-fog** coating
(28764)

RECOMMENDED
NEW 28764

3
You're safe to go with a complete bump cap, adaptor and **anti-fog** face shield kit!

Jackson Bump Caps, Adaptors, and Window Solutions

C10 Bump Cap Series (Bump Caps only)

- Bump caps are used to protect your head from minor bumps and scalp lacerations
- 4 pt. pin-lock suspension fits head sizes 6-1/2 to 8-1/4
- Features an absorbent brow pad for added comfort
- Can be customized with your company logo and branding needs
- **Please note:** To convert an existing bump cap for use with a face shield, use 14946 Jackson hard hat adaptor with 29107 8" x 15.5" x .035" PETG anti-fog window

PRODUCT NO.	Cap Color	Suspension	Case Qty.

64235

Introducing

The New R10 N95 Standard For All-Day Comfort, Fit, and Safety!

MADE IN THE USA

That's right! Jackson Safety is pleased to introduce an all-new N95 NIOSH-approved foldable disposable respirator designed for maximum all-day comfort. When your job requires the wearing of a protective mask, our Jackson 64235 introduces a new ultra-soft, ultra-comfortable respirator that significantly reduces facial irritation and discomfort. The pouch-style breathing chamber offers exceptional breathability while at the same time ensuring a minimum 95% filtration efficiency.

Look at these outstanding features:

- Ultra-soft non-irritating lining offers superior comfort over traditional N95 respirators
- Pouch-style breathing chamber provides exceptional breathability—check and compare!
- Two 1/2" extra-wide head straps and an adjustable nose clip further improves comfort and helps to ensure a tight facial seal, preventing leakage around the mask edges
- Nose clip reduces potential fogging of glasses and face shields
- Unlike traditional N95 masks, these respirators fold flat, reducing storage space requirements and shipping costs, as well as reducing the chance of product damage
- N95 NIOSH rating provides a minimum 95% filtration efficiency of 0.3 micron particles
- Features two layers of electrostatically treated melt-blown filter media,
- A single-use respirator designed for use by skilled professionals in critical environments who are mandated to wear specific PPE to protect against the transfer of aerosolized solid and non-oil based liquid/particulate matter
- Compatible with a variety of SureWerx protective eyewear and hearing protection
- Packed 50 per bag, 6 bags (300 pieces) per case
- **Disclaimer: Not intended for medical use**

KneePro Ultra Flex III Knee Pads

- Sellstrom's **KneePro Ultra Flex III** knee pads have been the industry standard for more than 30 years
- Simply the best knee pads made!
- The articulating hinged design ensures proper placement all day long—set them once and forget you are even wearing them
- Soft elastic, extra-wide woven straps with reinforced sewn ends are placed well above and below the knee—no Velcro, which contaminates over time
- Straps stay aligned with your legs in any position—will not bind behind the knee
- Built with strong, flexible hard plastic outer shells that extend well above, below and to the inside/outside of the knee for added knee and leg protection
- Metal rivet hinge ensures long lasting protection while kneeling or walking
- On the outside, pads feature a perfectly placed curved non-marking Grip Strip
- Grip-Strip designed for use in all applications without gumming up
- Grip Strips are easily replaceable
- On the inside, pads offer a long lasting 5/8" closed cell foam pad for maximum comfort and protection (KneePro Ultra Flex III version)
- Sweat does not penetrate closed cell foam—lasts longer and won't "stink"
- **Our KneePro Hybrid Ultra Flex III** version offers even greater user comfort and protection through the use of a three layer, 3/4"-thick closed cell foam pad with built-in gel packs—the ultimate in knee protection!
- Virtually indestructible—built for years of hard work and heavy use
- Specially designed Quick-Snap clips ensure quick and easy removal
- Comes in convenient, reusable mesh bag with one extra Quick-Snap clip
- Pads weigh only 9 oz. each
- Straps, Grip Strips, and speedklips are replaceable
- Excellent for welders, ship builders, roofers, construction workers, flooring installers, and anywhere hard-working knee pads are required

KNEE PADS—SPECIALTY

FOR HIGH HEAT APPLICATIONS

KneePro Roofers Knee Pads

S96350

Serrated inner pads channel air flow, creating cooler working environment.

- The KneePro Roofers vented foam rubber knee pads are specially designed for the tough roofers industry
- Manufactured using a special grade of ultra-dense rubber, offering extreme durability
- Non-marring rubber leaves no transfer on surfaces
- Inner pads are serrated, creating channels that allow air to flow through the pad
- These channels dissipate heat, creating a cooler working environment at the knee
- Ideal for roofers working in high-heat applications
- Straps are located to allow the calf muscle curvature to help hold the pads in place without pinching the knee joint
- The upper end of the pads is hooked upward and inward to help hold the pads in place on the knee
- Weight—1.25 lbs. per pad, 2.5 lbs. per pair
- Ideal for roofers, welders, and anyone kneeling on heated surfaces

KNEE PADS—ADVANTAGE SERIES

KneePro ZeroGravity Lightweight Knee Pads

S96310

- The KneePro ZeroGravity knee pad is one of the lightest yet toughest knee pads on the market today—weigh only 2 oz. each
- So light, you won't even know you have them on!
- The outer shell is made using a durable, heat-formed, non-marking material for maximum life
- The inner closed cell foam protective pad is a full 1/2" thick for superior comfort
- Pad is molded to contour of knee, which helps it to stay in place during use
- Revolutionary new fastening system pops in and out like a button for easy and convenient on/off action
- To adjust the strap, simply pull the strap end to a comfortable size
- Extra-wide, soft woven elastic cloth strap for improved comfort and fit
- Economically priced but built for hours of long-lasting protection and comfort
- Ideal for roofing, plumbing, flooring, tiling, gardening, carpentry, electrical work, maintenance, and home repair

WARNING: Due North® traction aids help give you traction on ice, snow, or similar porous surfaces. However, because NO product can completely prevent a slip or fall on slippery surfaces, remember to exercise care when walking or running in Due North® traction aids. Caution should also be taken when moving on any hard or polished surface, such as granite or marble, on ladders, or when driving a vehicle. Use care, as these traction aids are sharp and may injure or damage flooring, surfaces, or skin. Due North® traction aids are not to be used for mountaineering or hiking, in rocky terrain, or when the user may encounter steep up or down slopes. Due North® traction aids are not designed or intended to be used on high heel footwear. This product contains latex.

duenorth®
SLIP PROTECTION
KEEPING YOU GROUNDED

ICE TRACTION AIDS

Superior in all ways!

- Exclusive "military grade" tungsten carbide replaceable spikes for superior strength
- Extra-strong spike material allows Due North to use a smaller diameter spike, resulting in faster, easier ice penetration while ensuring longest life!

Replaceable ICE DIAMOND™ tungsten-carbide spikes

Due North products are manufactured using exclusive, specially formulated 100% rubber

Exclusive "Pulse Grip" tread design over a larger surface area provides even more traction on all surfaces

100% rubber is far superior to competitors using synthetic materials—check and compare!

ALL PURPOSE VERSION SHOWN

Provides maximum flexibility and durability in extreme cold conditions

LEADING THE WAY FOR REPLACEABLE SPIKE ICE TRACTION AID PERFORMANCE

Due North® Winter Traction product is ideal for those who walk, run, or work outdoors and require more stability and increased traction. Whether you're an industrial worker or someone who just needs extra stability in winter conditions, the enhanced design and improved shape will give you the extra confidence you need when walking or running on icy and snow conditions. The increased traction will help with preventing slips and falls on ice and snow, which reduces the risk of pulled muscles, fractured bones, or even back problems caused by a quick slip or fall. When not in use, the compact design makes them easy to store in small places, such as your coat pocket, handbag, briefcase, or the glove box in your vehicle.

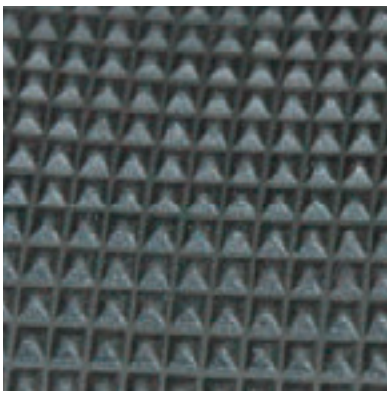
INDUSTRIAL TRACTION

ICE TRACTION AIDS—HEAVY DUTY INDUSTRIAL

SUPREME



Textured "Diamond Knurling" lining grips footwear and helps keep traction aids in place

ICE TRACTION AIDS— HEAVY DUTY INTEGRATED SPIKES

FOR EXTREME APPLICATIONS

The solution for extreme winter work environments to give you the utmost confidence on ice and snow.

- Introducing the new Due North Heavy Duty
- 40% more natural rubber provides maximum cut and abrasion resistance while ensuring maximum performance for the life of the product
- Additional features include a built-in retention strap for a more secure fit and molded-in spikes; no additional accessories or replacement spikes are needed
- In comparison to our current industrial grade product, the Heavy Duty has 28 molded-in military grade tungsten carbide spikes

INDUSTRIAL TRACTION

ICE TRACTION AIDS—INDUSTRIAL HEEL

*** BEST

HTA Easy Flip Heel Traction Aid (Replaceable Spikes)

Ideal for drivers, delivery personnel, or anyone operating machinery where use of a conventional, full coverage traction aid may interfere with driving capabilities

The HTA offers a unique design feature that quickly allows the user to flip the traction pad underneath the heel (spike side in) when encountering a walking surface that may be damaged by exposed spikes

8 SPIKES PER PAIR!

- "Military"grade tungsten carbide "replaceable" spikes maximize traction and performance
- Eight tungsten carbide spikes per pair—excellent for general industrial applications
- Exclusive specially formulated 100% rubber—provides maximizes flexibility and durability in extreme cold conditions
- **Patented design** allows the user to easily and quickly flip the traction pad spike side in (facing the heel of the boot), or to simply slip the pad out from underneath the heel completely, resting on the back of the boot. Both functions eliminate spikes from damaging sensitive floor surfaces
- The flip-up position allows the operator to avoid damaging sensitive surfaces by removing the spikes from surface contact
- Ideal for drivers, delivery personnel, and machine operators where use of a full-coverage traction aid may interfere with driving capabilities
- One size fits most

PRODUCT NO.	Old Code	Description	Strap Color	Spike Count	Size	Case Qty.
V3550470-0/S	heeltractionaid	Heel Traction Aid	Black	8/Pair	One size fits most	12

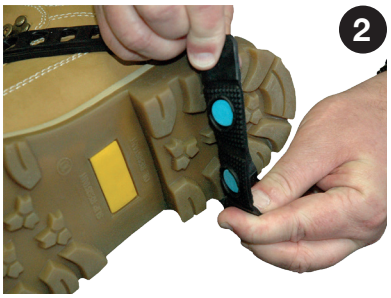
Ideal for drivers, delivery personnel, and machinery operators!

WARNING: Do not operate a motor vehicle with the HTA traction aid in active traction mode. The traction aid should always be in the "up" inactive mode position when driving.

It's as Easy as 1, 2, 3!

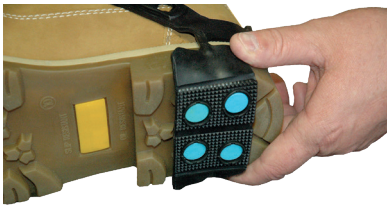
1

Full inactive mode or...



2

...Easily flip traction pad–spike side into heel



3

Flipped HTA traction pad–spike exposure eliminated

SAFETY APPAREL

Pioneer History

The Pioneer story began in 1887 in boomtown Vancouver. In the 1890s, the founders grew the business quickly by supplying gear to prospectors arriving from all over North America heading to the famous Alaska/Yukon Klondike Gold Rush. These “sourdough prospectors”, as they were called, fought mountainous terrain and the harshest climates in their long journeys to the northern goldfields. They relied heavily on their Pioneer gear to help them get the job done. Pioneer has now been keeping workers safe and comfortable for over 130 years.

Klondikers carrying supplies ascending the Chilkoot Pass, circa 1898

Over these years, Pioneer has grown a reputation for designing and building high-quality and innovative protective and safety apparel. Using only the best/safest materials, componentry, and by using advanced sewing methods, Pioneer continues to deliver on safety, fit, durability, comfort and value for the professional worker.

Today, Pioneer offers a complete selection of safety clothing including Hi-Vis gear, flame resistant wear, rainwear and much more… plus custom embroidery solutions. SureWerx combines Pioneer with the rest of the SureWerx family of safety brands to offer protection to workers from head to toe.

Why Choose Pioneer?

- Century long reputation for delivering the highest quality and most durable safety apparel
- Independently tested to meet and exceed all stated safety standards
- Innovative new product solutions based on the voice of the customer
- Unique bar tacking operation on all key seams, pockets, and other areas of stress
- Custom embroidery and silk screen solutions available
- Exclusive StarTech® reflective tape

ANSI/ISEA 107-15 AMERICAN NATIONAL STANDARD FOR HIGH-VISIBILITY SAFETY APPAREL AND ACCESSORIES

What is **ANSI/ISEA 107-15** American National Standard for High Visibility Safety Apparel and Accessories?

The latest ANSI/ISEA 107-15 version consolidates the requirements of ANSI/ISEA 107-2010 and ANSI/ISEA 207, American National Standard for High-Visibility Public Safety Vests, in an effort to establish a single comprehensive document that considers all occupational tasks. The standard continues to present three performance classes of garments based on the amount of visible materials and design attributes incorporated into the final configuration, and identifies garment types based on expected use settings and work activities being performed. These are designated as off-road (type O), roadway and temporary traffic control (type R), or public safety activities (type P). For a detailed explanation of these standards, visit www.safetyequipment.org/ansiisea-107-2015.

Listed below is a simplified explanation of the ANSI/ISEA 107-15 classes of garments:

CLASS 1–TYPE O

CLASS 1–TYPE O (Off Road)

Class 1 safety apparel are for workers whose jobs puts them at the lowest risk level. These would be for environments where traffic is traveling at or below 25 mph and work is taking place at a safe distance from a roadway. An example of this type of work would be sidewalk repair in a small residential neighborhood.

According to ANSI, in order for a vest to qualify as a Class 1 Type O safety apparel, it must have 217 square inches of background material in safety yellow or safety orange and have a minimum of 155 square inches of reflective tape. These reflective stripes must go around the middle of the vest as well as over the shoulder. These ANSI safety vests are designed to cover the torso only and do not require sleeves.

As defined by ANSI, “Performance Class 1 provides the minimum amount of high-visibility materials required to differentiate the wearer visually from non-complex work environments, in scenarios in which the struck-by hazards will not be approaching at roadway speeds, and therefore operative detection and identification distances.”

- Basic harness or safety tape over the shoulders and encircling the waist.
- Suitable in less complex work areas where workers are separated from car and truck traffic.
- Example: Class 1 = Class 1 tape configuration + non-retroreflective background material.
- Pioneer model #135AU (V1021571U) Hi-Vis Safety Vest and Pioneer model #337SFU (V2570470U) Flame Resistant Zip Style Heavyweight Cotton Safety Hoodie are both Class 1—Type O HVSA.

Ask us about our custom embroidery program

ANSI/ISEA 107-15 AMERICAN NATIONAL STANDARD FOR HIGH-VISIBILITY SAFETY APPAREL AND ACCESSORIES

CLASS 2–TYPE R and/or P (Roadway, Temporary Traffic Control, and/or Public Safety

Class 2 safety apparel is intended for working environments that pose a greater risk than Class 1. This can include workers who are on a roadway where traffic is moving under 50 mph. This apparel is larger than their Class 1 counterparts because they require more high visibility and reflective areas to be present. A Class 2 vest, for example, must have at least 775 square inches of safety yellow or safety orange background material and 201 square inches of reflective striping. Class 2 apparel are commonly worn by survey crews, airport baggage handlers, and school crossing guards.

- Full coverage of the upper torso including front, back, sides and over the shoulders.
- The background material must be high visibility.
- For use in more complex or low-light work areas requiring greater visibility.
- Example: Class 2 = Class 2 tape configuration + retroreflective background material.
- Pioneer model #6990U (V1051150U) Birdseye Safety T-Shirt is a Class 2—Type R and P garments.

CLASS 2–TYPE R AND/OR P

CLASS 3–TYPE R and/or P (Roadway, Temporary Traffic Control, and/or Public Safety

Class 3 safety apparel is reserved for people working in the most dangerous environments where visibility is the highest priority. This includes roadways where traffic is traveling in excess of 50 mph, but it can also apply to emergency personnel or tow truck operators working in extreme weather conditions where visibility is at a minimum.

Class 3 ANSI approved safety apparel requires the most background fabric and reflective striping. The standard includes 1,240 square inches of safety yellow or safety orange background with 310 square inches of reflective striping.

As defined by ANSI, “Performance Class 3 can offer greater visibility to the wearer in both complex backgrounds and through a full range of body movements by mandatory placement of background, retroreflective and combined-performance materials on sleeves and pant legs (if present). Regardless of the area of materials used, a sleeveless garment or vest alone shall not be considered Performance Class 3.”

- A Class 2 garment combined with arm and leg bands.
- The background material must be high visibility to the standard.
- Hi-Vis coveralls meet this standard; safety jackets (Class 2) and pants (Class E) can be worn combined, or arm/leg bands can be added to Class 2 garments, to attain Class 3.
- Suitable for use in complex work areas where low light, fast-moving traffic and inclement weather are safety factors.
- Example: Class 3 = Class 3 tape configuration + retroreflective background material
- Pioneer model #6690U (V1023550U) Hi-Vis Safety Vest With Sleeves, Pioneer model #5999AU (V1070160U) Hi-Vis Traffic Safety Coverall are all Class 3—Type R and P garments.

CLASS 3–TYPE R AND/OR P

SUPPLEMENTAL CLASS E

ANSI/ISEA 107-15 AMERICAN NATIONAL STANDARD FOR HIGH-VISIBILITY SAFETY APPAREL AND ACCESSORIES

SUPPLEMENTAL CLASS E

ANSI Supplemental Class E applies to Hi-Vis pants, bib overalls, shorts, and gaiters. Alone, these garments are not ANSI compliant. When combined with a Class 2 or Class 3 garment, the combination satisfies Class 3 requirements. This classification remains the same under the ANSI/ISEA 107-2015 standard.

ANSI designates “pants, bib overalls, shorts, and gaiters” as Class E.

- Class E garments must always be worn in combination with other items to meet HVSA PPE requirements.
- Class E items worn in combination with Performance Class 2 or Class 3 items will achieve an overall classification of Performance Class 3.
- Pioneer model #5404AU (V1200451U) Hi-Vis 300D Ripstop Waterproof Safety Bib Pant and Pioneer model #5999PU (V1070360U) Hi-Vis Traffic Safety Pant are both Class E HVSA.

Safety officials in your region determine the appropriate class wear for specific job sites. Hazardous risk assessment should be performed by a qualified individual to determine the applicable high visibility classification.

Arms	29	30	31	32	33	34
Hip	35	37	39	42	45	48
Inseam	27	28	29	30	31	32
All measurements in inches. Talls in Coveralls are 2 inches longer in the torso and 1 inch longer in the sleeves and legs.						

Measurement Directions:

Neck: Measure around the base of your neck, round up to the next half-inch.

Chest: Measure around your chest, under the arms and across the shoulder blades, over a shirt if stomach is larger than chest; choose the larger size.

Waist: Measure around your waist at the level you normally wear your pants, over a shirt.

Hip: Standing with feet together, measure around the widest part of your hips, parallel to the floor.

Inseam: Measure a good-fitting pair of pants along the inseam, from crotch seam to bottom edge of cuff.

Sleeve: Bend arm and place fist on hip. Measure from center back of your neck, across shoulder and down arm to elbow and then to your wrist. This is your sleeve length.

For working garments, measure liberally to find your size, as you need freedom of movement.

STAR TECH®

STARTECH® reflective tape is exclusive to Pioneer safety products. It is designed and tested to far exceed the ANSI/ISEA 107-15 high-visibility safety apparel reflective tape standard.

STAR TECH® Reflective Material

STAR TECH® FR Reflective Material

StarTech® reflective tape has been independently tested to meet:

- ANSI 107-15 American National Standards Institute
- EN ISO 20471 High-Visibility Standard Level 2 high-visibility safety apparel and accessories

StarTech® FR tape is made of FR cotton or aramid material as backing and has been independent lab-tested to meet:

- CGSB 155.20-2017 (Heat-Resistant Test)
- NFPA 2112-2018 Standard on Flame-Resistant Garments for Protection of Industrial Personnel against short duration thermal exposure from fire

The many standards for reflective tapes all require passing a battery of tests that simulate working conditions.

These include measuring the retroreflective performance of StarTech® tape after being subjected to abrasion, multiple flexing, cold temperatures, variable temperatures, multiple washings, wet conditions, and, for the FR version, its heat resistance properties as well. Due to its premium design and quality, StarTech® tape not only meets but exceeds all of these standards!

NFPA (National Fire Protection Association) 2112-2018—Standard on Flame-Resistant Garments for Protection of Industrial Personnel Against Flash Fire

- NFPA 2112-2018 requires 3rd party certification through UL.
- Tests performed under NFPA 2112:
  1. Heat transfer performance—predict burn injury (2nd or 3rd degree burn).
  2. Flame resistance—ASTM D6413 as received and after 100 wash cycles. Tested for 3 secs.
  3. Thermal shrinkage resistance/Heat resistance test—Oven test at 260°C.
  4. Manikin testing—ASTM F1930—Manikin has sensors and is subjected to 84kW/m^2 for flame for 3 secs. to verify if 2nd or 3rd degree burns are recorded.
  5. Thread melting resistance—260°C of heat is applied to verify if thread melts.
  6. Other tests included: label legibility, fabric weight, tensile strength, tear strength, material burst strength, laundering shrinkage, colorfastness, seam efficiency.

Electric Arc Standards

Test Method:

- ASTM F1506-2018—Standard Performance Specification for Flame Resistant and Arc Rated Textile Materials for Wearing Apparel for Use by Electrical Workers Exposed to Momentary Electric Arc and Related Thermal Hazards.

Standards:

- NFPA 70E-2018—Standard for Electrical Safety in the Workplace.

What is ARC Flash?

When an electric current passes through air between underground conductors or between underground conductors and grounded conductors, temperatures can reach 20,000°C (35,000°F).

Exposure to these extreme temperatures burns the skin directly and ignites clothing, which adds to the burn injury.

The majority of hospital admissions due to electric accidents are from arc flash burns, not from shocks.

ASTM F1506-2018

- Both NFPA 70E and CSA Z462 define the following categories for ARC rated clothing
- ATPV (Arc thermal protective value)—point at which 2nd degree burn is registered on the sensor and fabric is still intact
- EbT (Break-open threshold)—point at which 2nd degree burn is registered on the sensor and fabric has broken/formed a hole
- Minimum ARC rating required 4 Cal/cm^2
- ARC 1—4 Cal/cm^2 to 7.9 Cal/cm^2
- ARC 2—8 Cal/cm^2 to 24.9 Cal/cm^2
- ARC 3—25 Cal/cm^2 to 39.9 Cal/cm^2
- ARC 4—40 Cal/cm^2 and up.

Tests in this standards go way beyond testing for ARC rating:

- Breaking load test—Grab test
- Tear resistance
- Seam slippage
- Colorfastness—Laundering/Dry Cleaning—three cycles of washing
- Dimensional Change—Max 3%
- Flammability—Char length needs to be below 150mm
- Before and after 25 washes, Bursting strength, Arc Rating

WARRANTY

Garment and Safety Gear

Pioneer warrants all garments to be free of defects in materials and workmanship under the normal use for which the product is intended. Normally, a garment defect of manufacture will show up in the first two months of use.

This warranty is limited to product failure as a result of seam separation, broken snaps or zippers, material delaminating, or any defect in material or workmanship that affects the performance of the garment.

Excluded from this warranty are products that have been affected by cuts or punctures, disfigured from continued wear or use, and products that have been exposed to solvents or excessive heat which may degrade their performance and garments that have not been maintained as per wash care instructions on the garment.

Warranty claims will only be provided for those products that have been made available for inspection by Pioneer. Any warranty claim on garments that have been purchased over 60 days ago will have to be accompanied by pictures and/ or defective garment itself for inspection. To maintain our health and safety standards, all products returned for inspection must be free of all removable debris. Any products returned that do not meet the above conditions will be returned to the customer at their expense.

Pioneer shall not be liable for indirect, special, incidental, or consequential damage or penalties and does not assume liability of purchaser or others for injury to persons or property.

For a warranty claim on a Pioneer garment, please contact your local sales or customer service representative.

PEACE OF MIND

PeakWorks Knows Fall Protection

From its inception in 2008, PeakWorks has been passionate about providing workers peace of mind when working at heights. The PeakWorks founders, with over 50 years of fall protection experience between them, set out to build a company that not only offered an industry-leading product line, but also provided their customers with value-added services supplying real solutions for both workers and the companies employing them. Today, as an integral part of our family of brands, we embrace those same principles. We know that the best fall protection is to eliminate the fall hazard in the first place. However, we also know that life doesn't always work that way. Our single goal, then, remains very simple: to ensure the best possible outcome when the unexpected occurs.

PeakWorks Embraces Industry Standards

Our in-house fall protection experts are driven to provide the best possible products and systems to ensure maximum worker safety. Like you, we live and work in North America, and we are intimately knowledgeable about the strict regulations imposed in this country, which has the highest standards in the world. In fact, we are so dedicated to the advancement of worker safety that our fall protection experts are active members of both the CSA and ANSI standards committees. Not only do we adhere to these standards, we help to develop them!

PeakWorks Thrives on Problem Solving

PeakWorks is all about solving problems for workers at height. Our team of experts is available to consult on applications, hazard analysis training, recertification of products and much more. If you need help, we are just a phone call away!

PeakWorks Offers Uncompromising Value

Great news! Not only have we developed a world-class fall protection program, we have also made every effort to ensure that it is delivered at the best value to you, the customer. We have accomplished this without compromising product quality—your safety remains our primary objective. So give us a call and let us know how PeakWorks can not only exceed your safety expectations but potentially lower your overall fall protection costs at the same time.

ANSI Certification

Products that are certified to the ANSI standard is much different than products that meets or exceed ANSI standard. Certified to ANSI means that the product has been tested and certified by a third party testing facility that have meet all the requirements of ISO 17025. The products undergo all the testing that is set forth by the ANSI standard to qualify as certified product. This gives the user an extra level of assurance that the product will perform as designed. On the other hand, if a product has the term "Meets or exceeds" on the labeling or instruction manual, it simply means that the manufacturer has tested the products internally usually without a 3rd party verification. It's important that you as the user of the equipment understand these difference so that you can make an informed decision on the products you are using or specifying to use in the field.

FALL PROTECTION DEFINED

What is Fall Protection?

Fall Protection refers to a series of regulated products or systems designed to protect workers from the risk of falls when working at height.

Types of Fall Protection

There are three basic types of fall protection available on the market:

Fall Restraint–Comprised of products or equipment which prevent a free fall from happening in the first place. The fall restraint system is designed to prevent a worker from ever reaching the edge or drop-off point when working at heights. Common examples: Guard Rails or Restraint Lanyards connected to Full Body Harnesses that are shorter in length than the distance from the Anchor Point to the Drop-Off Point.

Fall Arrest–Comprised of products, equipment or systems which stop a free fall once it occurs. These products are carefully designed and tested to stop a falling worker with minimal risk of injury. Common examples: Full Body Harnesses connected to Shock Absorbing Lanyards, or Self-Retracting Lifelines that are connected to an approved Anchor Point.

Work Positioning–Comprised of products or equipment which support or suspend a worker in order to allow the worker to be positioned at their working point hands-free. Common examples: Rebar Chain Assembly, Boatswain's Chairs, Descent Controllers.

Know Your ABCs

Fall protection systems are designed to prevent contacting a lower level if you fall from a height. There are several key components to these systems and it is important to know the basics.

A = Anchorage Connectors–The Anchorage is an engineered product which connects to some form of structure. The combination of these two critical components must be capable of withstanding the forces incurred during a fall. In North America, these components must be capable of withstanding a minimum 5,000 lb (22 kN) of force. Common examples: Anchor Slings, Fixed D-Rings, Beam Anchors, Concrete Hole Anchors, Carabiners.

B = Body Support–The Body Support is the component that is worn on or around the torso. There are two types of Body Support:

Restraint Belt:
Belt that is installed at the waist and used for worker positioning and travel restraint. A Restraint Belt must NEVER be used for fall arrest.

Full Body Harness:
A Full Body Harness is a body support device that is installed on the entire body and is designed to distribute the forces of a fall to the shoulders, thighs and pelvis.

All Full Body Harnesses have a back D-ring designed for the fall arrest connection point. Other styles of Full Body Harnesses are available with other attachment points such as side D-rings for work positioning, a frontal D-ring for ladder climbing, and shoulder D-rings for confined space work. Some styles of harnesses can also have a combination of all or some of these attachment points, for example our Class APLE has the following connection points: (1) back D-ring, (2) side D-rings, (1) frontal D-ring and (2) shoulder D-rings.

Full Body Harnesses are the only accepted body support to be used for a fall arrest application. NEVER use a Restraint Belt in a fall arrest application.

C = Connectors–Connectors are the engineered components that connect the Body Harness or Body Belt to the appropriate Anchorage. Common examples: Shock Absorbing Lanyards, Self-Retracting Lifelines (SRLs), Restraint Lanyards, Lifelines.

PEAKWORKS™

HARNESSES

SECURING YOUR PEACE OF MIND

FULL-BODY HARNESSES

About Full-Body Harnesses

- Full-body harnesses are designed to arrest a fall while simultaneously distributing the tremendous shock or load to the worker's body.
- There are many applications and conditions in which full-body harnesses must be worn. In order to maximize effectiveness and minimize injury, it is critical that an appropriate body harness be selected based on the job for which it is intended. PeakWorks offers a full range of body harnesses for almost every application.
- Full-body harnesses must be fitted and tightened properly to ensure maximum protection and to minimize injury.
- Waist or restraint belts are not replacements for full-body harnesses.
- All PeakWorks full-body harnesses are built to meet or exceed the highest standards while providing maximum fit and comfort.

Harness Classes

- Full-body harnesses come in many styles with a variety of attachment points (D-rings). The placement of these D-rings is critical to the type of application and positioning of the worker when performing a job.
- The fall protection industry and regulatory committees have standardized the positioning of these attachment rings into Harness Classes A, D, E, L, P.
- Depending on the application, full-body harnesses may require more than one attachment class in order to correctly position the body and stress points during a fall; i.e., AE and AP.
- All full-body harnesses come with a standard Class A D-ring (located at the back between the shoulder blades).

PEAKPRO PLUS

**** SUPREME

- Peek-a-boo webbing has wear indicator for simple inspection
- Hi-Vis yellow top and black bottom, easily visible and distinguishable for ease of donning
- Five points of adjustment ensuring a good fit (two leg, two torso, one chest)
- Buckles: premium Stab Lock (chest), Stab Lock (legs)
- Premium padded shoulder, back and leg straps for all-day comfort
- Anodized aluminum hardware for reduced weight and no corrosion
- Includes installed trauma straps at no additional cost
- Includes integrated padded belt

PEAKPRO

*** BEST

- Hi-Vis green top and black bottom, easily visible and distinguishable for ease of donning
- Five points of adjustment ensuring a good fit (two leg, two torso, one chest)
- Buckles: premium Stab Lock (chest), Stab Lock (legs) or grommets (legs)
- Padded shoulder, back and leg straps for all-day comfort
- Includes installed trauma straps
- Available as harness & belt combo or just the harness.

Compliance Series

GOOD

Third Party Certification

The PeakWorks Compliance Series harness is the best value on the market. When compliance and price are the key drivers, this harness is the solution.

- High visibility color
- Three points of adjustment ensuring a good fit (two leg, one chest)
- Two lanyard parks on chest strap for easy storage of lanyard
- Pass-thru leg and chest buckles for quick donning
- Sub-pelvic strap for added safety and support
- Fall indicator for easier inspection before use
- Large back D-ring for easy connection
- Polyester webbing
- 130 to 310 lb. (60 to 141kg) capacity (combined weight of person, tools, clothing, etc.)
- Certified to both **ANSI Z359.11** and **CSA Z259.10** standards
- Meets or exceeds all applicable **OSHA** standards

TRAUMA STRAPS

- In the event of a fall, trauma straps help reduce the effects of suspension trauma
- Trauma straps can be added to any PeakWorks® full body harness
- Trauma straps are an important part of any rescue plan

How to Use Trauma Straps

- Pull the straps out of their packs
- Clip the straps together
- Step into the straps

HELPS TO PROVIDE PROPER CIRCULATION WHILE AWAITING RESCUE

Orthostatic Intolerance or Suspension Trauma

- Blood can accumulate in the veins while in a sedentary position
- Reduction in quantity and/or quality (O_2) of blood flowing to the brain and kidneys
- May be fatal

Suspension Trauma Signs and Symptoms

- Faintness
- Breathlessness
- Sweating
- Paleness
- Hot flashes
- Increased heart rate
- Nausea
- Dizziness
- Unusually low heart rate
- Unusually low blood pressure
- Graying loss of vision

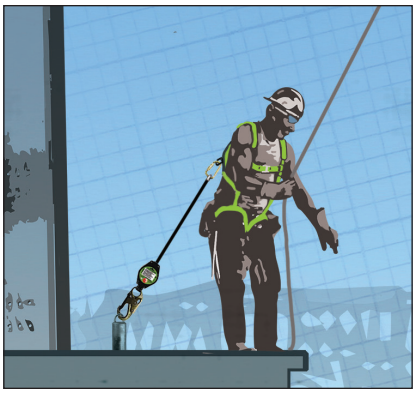
PEAKWORKS™
SELF-RETRACTING LIFELINES
REACH YOUR PEAK SAFETY PERFORMANCE

SELF-RETRACTING LIFELINES (SRLs)

Choosing the Right Self-Retracting Lifeline

There are different styles of SRLs that can be used for different applications. It is important to consider the specific application when choosing an SRL. Knowing the type of work environment, where the attachment point of the SRL is located on the job site, what the worker will be doing at heights and the required location of the fall protection will be crucial information to choosing the correct SRL. Below are questions to consider when choosing the appropriate SRL.edge and where a fall hazard exists that could cause the lifeline to come into contact with the edge; for example, when working over structural steel or in high-rise concrete buildings under construction with open flooring.

Will the Installation of the SRL be Overhead (Vertical) or at Horizontal/Foot-Level (LE)?



Horizontal/Foot-Level (LE)

- If there is no anchorage point overhead to connect an SRL, you will likely be connecting at foot level or horizontally, also known as leading edge (LE) application.
- A leading edge can be described as any sharp edge commonly found on a work site with which a cable or webbing connection could come into direct contact during a fall.
- An SRL-LE device is an SRL that has enhanced design features for use in leading edge applications and must always be used for any leading edge application.

Allowable Edges on your SRL-LE device?

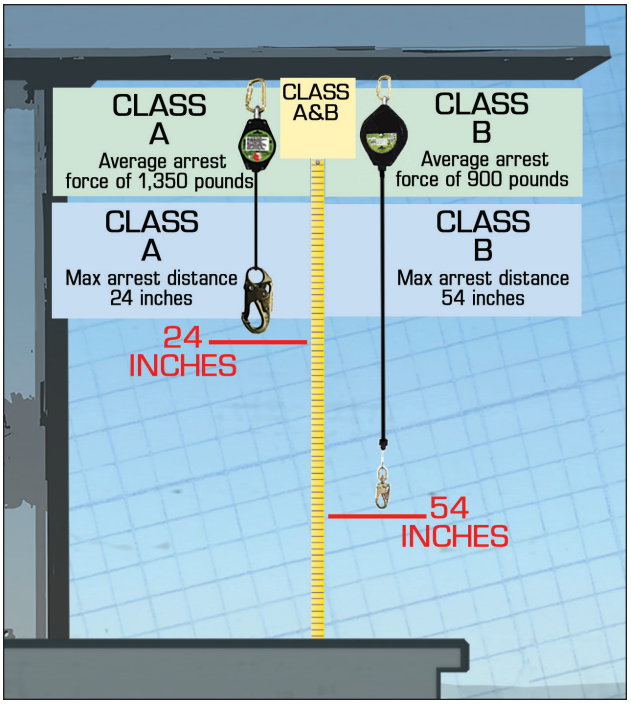
- ANSI Z359 standard only requires leading edge testing over a steel sharp edge with radius of .005 inches to classify an SRL as leading edge approved. (Identified by the global sharp edge symbol below)
- ANSI Z359.14 standard does not cover testing over additional materials commonly found on many job sites, such as concrete edges, wood edges, paneled rounded fascia.
- It is important to be aware of additional edge materials that the lifeline might come in to contact with and verify if the SRL-LE can be used in that application with the manufacturer.

Global Sharp Edge symbol–
Radius as sharp as .005 in. (.13mm)

Vertical (non-LE)

If the installation will be overhead or at shoulder level, you should determine the minimum fall clearance requirement on the job site to help identify the correct class of SRL you should be using. ANSI Z359 classifies an SRL as a CLASS A or CLASS B with the differences in arresting distances and average arrest forces indicated in the image below.

The extra 2-1/2 feet difference in arresting distance between ANSI Class A and B is a critical factor if you only have 6 feet fall clearance from the lower level (danger level).



SELF-RETRACTING LIFELINES (SRLs)

Peakworks SRL-LE Clear Advantage

One Device for Both Applications

- PeakWorks offers one device that is certified as ANSI Z359.14 CLASS A in vertical non-LE applications as well as leading edge certified for use in horizontal applications. One product works for most applications
- Reduces inventory duplication and safety investment costs

Deceleration System

- Unlike most SRL-LE devices in the market, PeakWorks SRL-LE devices do not require an external shock pack in order to meet the leading-edge standards due to the exclusive internal braking system
- This translates to shorter arresting distances in both vertical and horizontal orientation (refer to page 187 for fall clearance comparison)

Allowable Edges

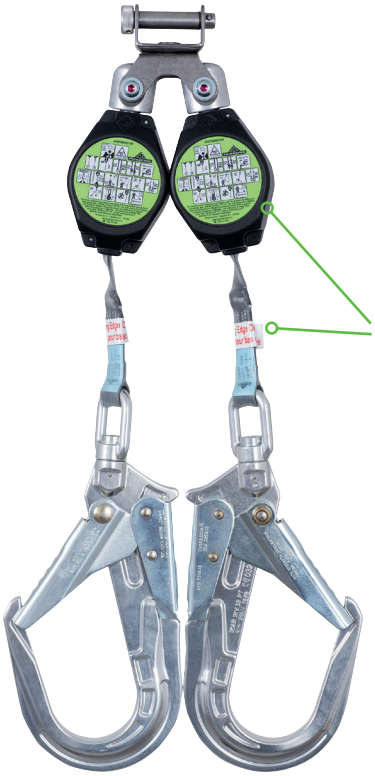
- PeakWorks SRL-LE devices have had additional testing over multiple leading-edge materials commonly found on job sites, such as concrete edges, wooden beams, paneled rounded fascias, and trapezoidal sheet metal
- Contact a PeakWorks representative for information on additional material testing

Dyneema® Webbing vs Cable

- PeakWorks SRD-LE units are up to 32% lighter than competitors' SRD-LE of equivalent length
- Thin webbing accommodates smaller housing design
- Outstanding versatility for use on multiple surface materials
- Dyneema® webbing is a proven LE-rated material

THE PEAKWORKS LE ADVANTAGE

- No shock pack required
- Reduces fall clearance by up to 4 feet!
- Certified for both vertical and horizontal applications
- Ultra lightweight!



PeakWorks Leading Edge-rated devices can be identified with labels on the housing and lifeline

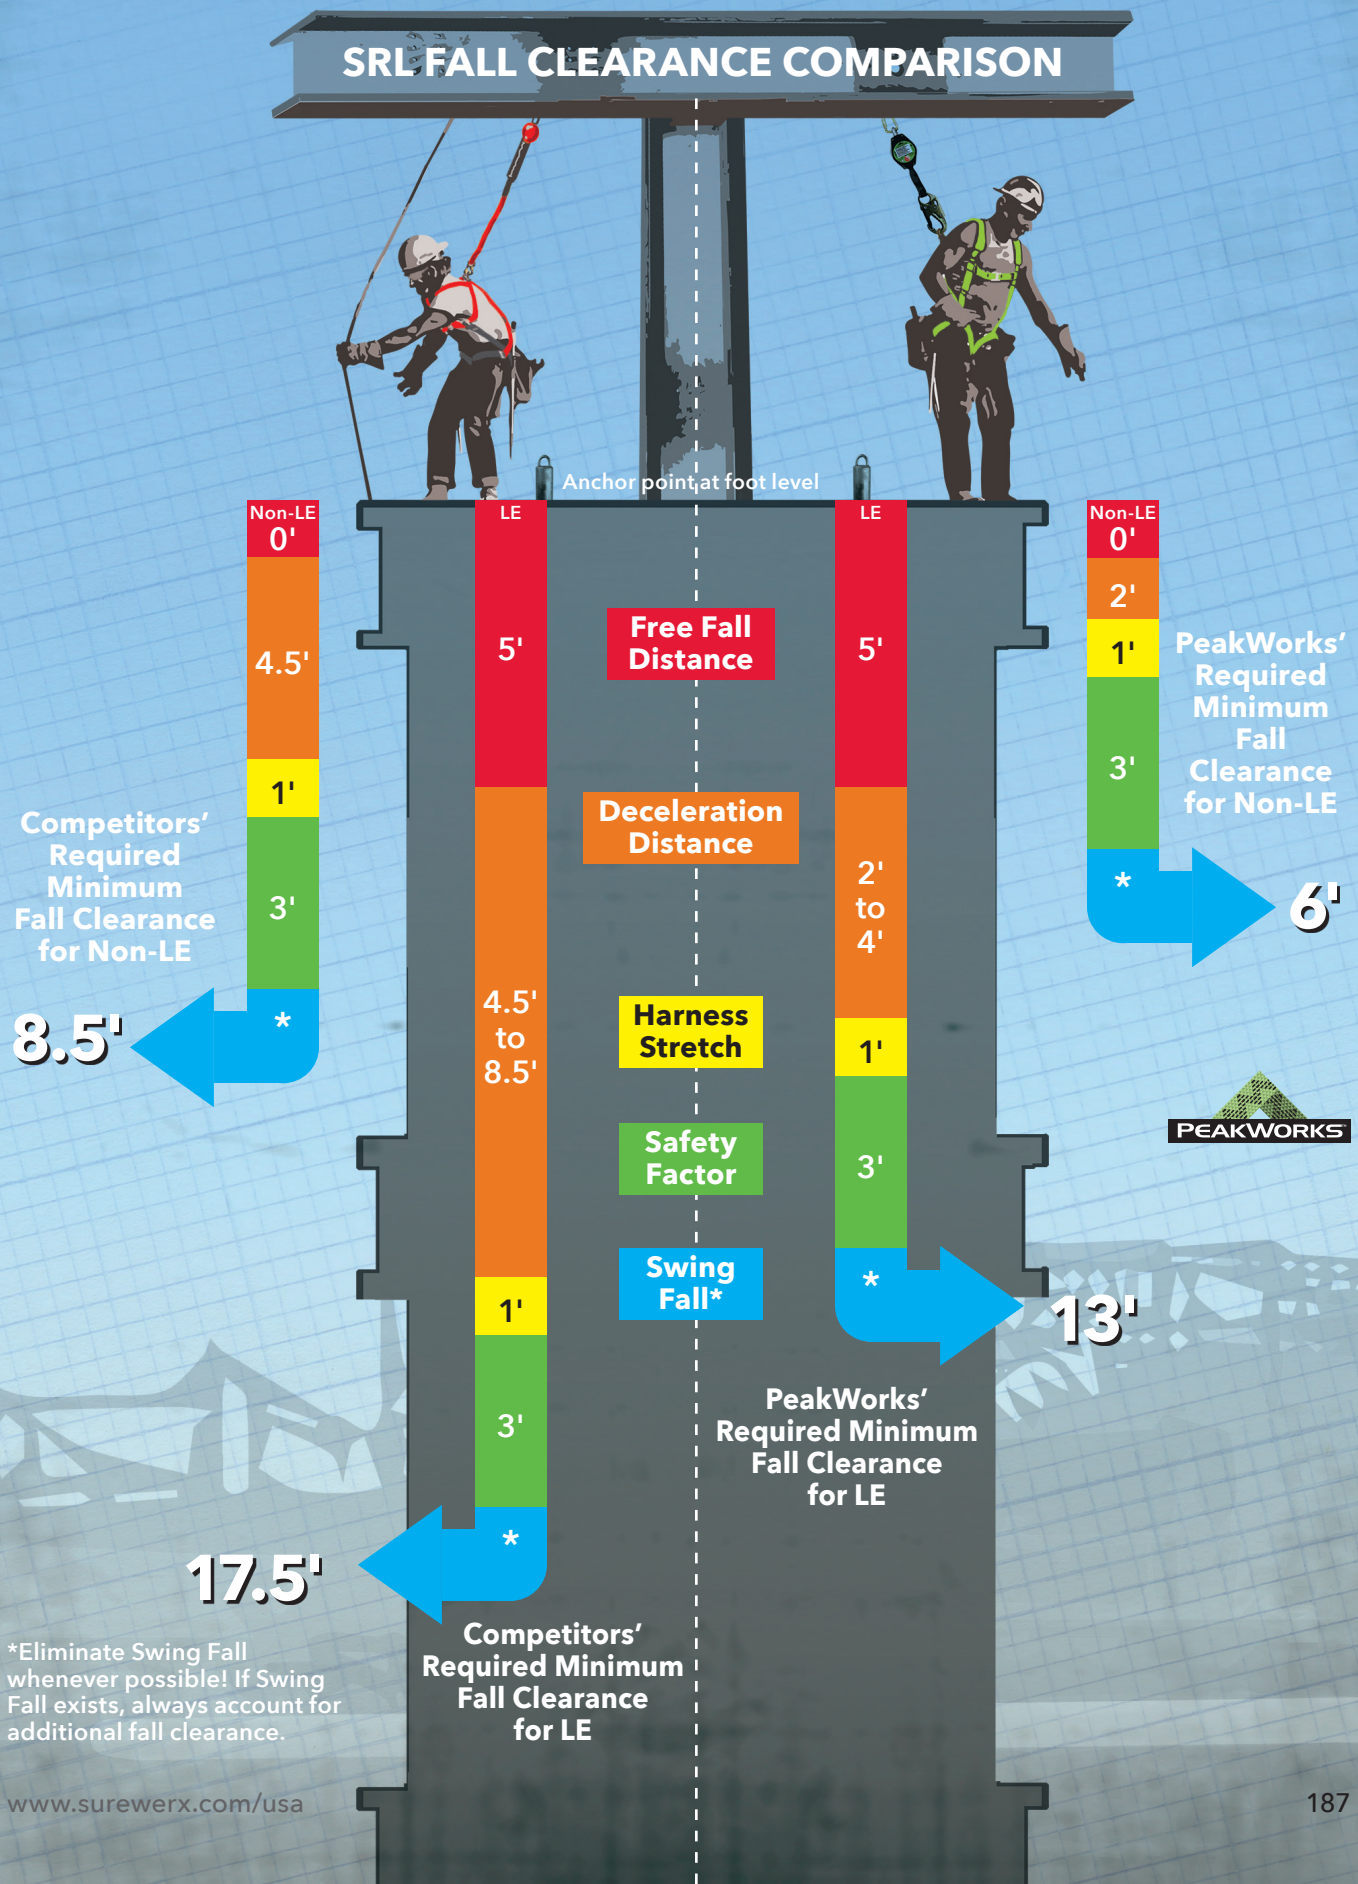
V845526006LE

PeakWorks understands the importance of calculating the fall clearance, which is why we created an app for calculating fall clearances. Visit the App Store today to download it.

Download on the App Store

ANDROID APP ON Google play

THE PEAKWORKS SRL-LE FALL CLEAR ADVANTAGE!



*Eliminate Swing Fall whenever possible! If Swing Fall exists, always account for additional fall clearance.

SELF-RETRACTING DEVICE (SRD)—LEADING EDGE

Dual Tie-Back LE

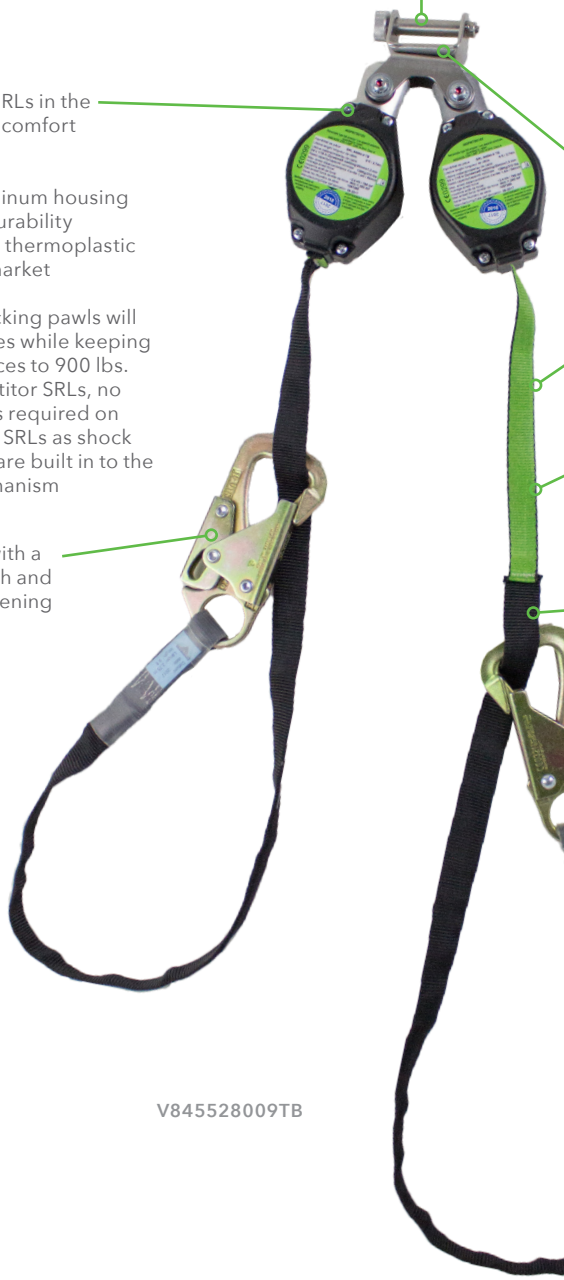
COMPACT UNIT

Among the smallest SRLs in the market. Designed for comfort and to reduce fatigue

Impact-resistant aluminum housing provides maximum durability compared to nylon or thermoplastic housing SRLs in the market

Internal automatic locking pawls will stop a fall within inches while keeping average arresting forces to 900 lbs. or less. Unlike competitor SRLs, no external shock pack is required on any of the PeakWorks SRLs as shock absorbers capability are built in to the internal braking mechanism

Tie-back snap hook with a 5,000 lb. gate strength and 0.83" (21mm) gate opening



Harness bracket allows for easy installation under the D-ring and provides a snug backpack-style fit. No separate carabiner required for harness connectivity on dual SRLs

Provides 360° rotation and leaves the harness dorsal D-ring open for rescue or other equipment attachment

Swivel top keeps the lifeline from tangling and twisting

6 ft. retractable lifeline reduces dragging and trip falls

Hi-Visibility green Dyneema® webbing allows workers to easily inspect webbing for damage

3 ft. of abrasion-resistant outer jacket tie-back legs wrap around the anchor point, allowing the tie-back snap hook to tie back on to itself

Offers more mobility for workers allowing the tie-back leg to connect where traditional anchorage connectors are not available or feasible

Impact indicator provides visual inspection

V845528009TB

Using the correct snap hook on your SRL tie-back makes all the difference

PeakWorks designed the new Tie-Back with a special snap hook that will not accidentally open under gate load. Be sure to use approved Tie-Back gear that is certified to meet ANSI standards 5,000 lb. gate strength.

Tie-back hook (3/4" (19mm) Gate opening)

Mini Form hook (2" (51mm) Gate opening)

Snap Hook (3/4" (19mm) Gate Opening)

Form Hook (2-1/2" (64mm) Gate Opening)

SELF-RETRACTING DEVICE (SRD)—LEADING EDGE

Tie-Back SRD-LE—Class A

Tie-Back

- Tie-back is an all-in-one, self-retracting lifeline and anchorage connector, thus reducing the amount of equipment required on the job site and making it a cost-effective alternative
- It allows the unit to attach directly to a compatible structural anchor by wrapping around the structure to tie-back to itself
- Single and dual 100% tie-off configurations available
- **Approved for use in vertical and horizontal applications**
- LE minimum fall clearance: 13 ft. (4m)
- Maximum total arrest distance: 24 in. (0.61m) non-leading edge application
- Average arrest force: 765 lbf (3.4kN)
- LE minimum setback distance: 12 in. (0.31 m)
- Third-party certified to **ANSI Z359.14-2014, Class A** and **Leading Edge**, meets applicable **OSHA** standards

Third Party Certification

ANSI American National Standards Institute

LANYARDS

Snap Hook
(3/4" (19mm) Gate Opening)

Form Hook
(2-1/2" (64mm) Gate Opening)

About Lanyards

- Lanyards are engineered products, and the critical connection component between the full body harness and the anchor. They are sometimes referred to as connectors
- PeakWorks lanyards are designed and tested to comply to strict CSA and ANSI standards
- There is a wide variety of lanyards to suit a wide range of applications
- There are two common types of lanyards: Fall Restraint and Fall Arrest

Fall Restraint Lanyards

- Fall restraint lanyards are a fixed-length connection and have no shock absorbing capability
- These lanyards are designed to limit the distance a worker can move from the anchor point and towards the edge of the structure and should never be used when there is a risk of falling

Fall Arrest Lanyards

- The shock absorbing action of these lanyards limits and reduces the force of a fall on the worker, significantly reducing injury to the body

SP (Shock Pack):

- SP (Shock Pack) lanyards are comprised of "tear webbing" which is woven in a manner that allows the webbing to tear when it has a load applied to it. This tearing absorbs a significant amount of downward force under load, reducing injury
- This tear webbing is folded and shrink-wrapped into a compact 1" x 2" x 6" (2.5cm x 5cm x 15cm) pack that is sewn into the lanyard next to the body connector
- Cable lanyards are ideal if you're working in abrasive or high-heat environments

SHOCK ABSORBING LANYARDS

Shock Pack (SP)

PeakWorks Shock Pack (SP) shock absorbing lanyards are certified to **ANSI Z359.13** standards.

- Made with a superior grade, heavy-duty 1-3/4" (45mm) or 1" (25mm) polyester webbing for maximum strength or 1/4" (6mm) galvanized plastic coated cable, with tear webbing shock absorber
- Resists abrasions and harmful UV rays
- Shock packs are designed to tear the inner webbing to reduce the force the worker feels to an acceptable level

Preventing a fall is a better way of protecting workers than arresting a fall. For these applications, PeakWorks has a wide selection of fall restraint lanyards. Fall restraint lanyards should never be used if there is any risk of falling.

- Fall restraint lanyards are a fixed length connection and have no shock absorbing capability
- These lanyards are designed to limit the distance a worker can move from the anchor point and towards the edge of the structure and should never be used when there is a risk of falling
- PeakWorks restraint lanyards are made using two types of material—a rugged heavy-duty polyester webbing or a premium polyester rope—and with a variety of hook configurations
- PeakWorks restraint lanyards are available in 4' (1.2m) and 6' (1.8m) lengths

VL-1125-X

V84084XXX
VL-1825-X

- Lifelines are specially designed from rope made using high-strength polysteel
- Polysteel is an extruded co-polymer fibre that yields an extremely high-strength, lightweight rope with excellent resistance to acids and alkalis
- PeakWorks vertical lifelines are all 5/8" (16mm) in diameter
- Minimum breaking strength 6,000 lbs (27kN)
- We offer a wide range of lengths with a variety of snap hook/carabiner options
- All PeakWorks lifelines have a back splice at the trailing end to prevent the rope grab from coming off the end of the lifeline
- Certified to **CSA Z259.2.5-2012** and meets or exceeds **ANSI Z359.15** standards

DID YOU KNOW?

Automatic rope grabs are designed to move easily up and down vertical lifelines hands-free to provide continuous fall protection. PeakWorks rope grabs include a shock-absorbing pack to reduce arresting forces in the event of a fall.

VERTICAL LIFELINES & ROPE GRABS

Rope Grabs

- Rope grabs are designed to travel hands-free on 5/8" (16mm) rope
- These automatic rope grabs follow the user during their ascent or descent
- In the event of a fall, the rope grab will "bite" onto the rope and arrest the user's fall
- PeakWorks rope grabs are also equipped with a panic lock feature which "bites" onto the rope even if the user mistakenly pushes the cam up, ensuring that the rope grab will lock and arrest the fall in any situation
- Rope grabs offer the most cost-effective fall protection solution when working at height
- 130 to 310 lb. (60 to 141kg) capacity (combined weight of person, tools, clothing, etc.)
- All Peakworks rope grabs meet or exceed **ANSI Z359.15** standards

PEAKWORKS™

ANCHORAGE CONNECTORS

ANCHORAGE CONNECTORS

Anchors and Roof Brackets

- A complete fall arrest system requires three primary components: approved full body harness, connector and anchorage connector
- Anchors can be connected to a variety of materials such as steel, wood and concrete
- PeakWorks offers a wide range of anchor systems including: single-use/reusable roof anchors, sliding beam anchors, concrete hole anchors and permanent anchors
- The anchor should be located directly above the worker to prevent swinging
- The height of an anchor is a key variable when determining fall clearance
- As with all fall protection products, anchors must be inspected by a competent person at a minimum annually
- All PeakWorks anchors are built with a minimum tensile strength of 5,000 lbs (22 kN)
- All PeakWorks anchors meet or exceed **CSA Z259.15** and **ANSI Z359.18** standards and **OSHA** requirements
- 310 lb. (141kg) capacity for one worker (combined weight of person, tools, clothing, etc.)

Overhead beam clamps are designed to attach to overhead structure without the aid of any tools. Simply adjust the size of the clamp to the bottom flange of the beam, lock it in place and its ready to go. The beam anchors provide a safe and practical solution to connecting to overhead beams. PeakWorks offers two styles of beam clamps.

1) Stationary–fixed in one location

2) Sliding–which can follow the worker to prevent a swing fall

Both beam clamps style models have a breaking strength of 5,000 lbs. (22kN).

PRODUCT NO.	MODEL NO.	Product Name	Size of Beam	Style
V8222130	**CP-11010-1**	Adjustable Sliding Beam Anchor	3.5" to 13.25" (88.9mm to 336.6mm)	Sliding
V8221131	**AC-9450-SBAR**	Sky Bar	3.5" to 12" (88.9mm to 304.8mm)	Stationary
V8222150	**CP-11010-3**	Aluminum Super Sliding Beam	3.5" to 12" (88.9mm to 304.8mm)	Sliding

V8222138

I-Beam Trolley

- Designed to easily roll along over head I-beams while trailing the worker.
- Can be be removed and reused with out any tools.
- Easily adjust to various I-beam widths ranging from 3" to 10"
- **ANSI Z359.18** and meets applicable **OSHA** standards for 5,000 lbf / 22 kN

ANCHORAGE CONNECTORS

Drop-In/Drop-Thru Anchors

Removable Anchors

Removable anchors, developed for fall protection, are safe, lightweight, and surprisingly simple to employ. PeakWorks manufactures three styles of removable anchors

1) Drop-Thru Anchors
2) Concrete Anchors
3) Toggle Anchors

Drop-Thru Anchors

The Drop-Thru Anchor is a removable and reusable anchor designed for overhead applications. Available in three different sizes: 4", 6", and 12" diameter plates. Simply insert the cable end of the anchorage connector to an approved anchor and begin using it. Once the task is complete, pull the cable back through the opening and it's ready to be re-used.

Concrete Anchors

PeakWorks anchors have been tested to meet ANSI Z359.18. They have a long list of benefits above competitive products. A few include:

- Ease of use—simply drill the proper size hole into your concrete, blow the dust out with compressed air, and insert the unit
- Multi-directional attributes—PeakWorks removable anchors work in horizontal, vertical and overhead surfaces
- Reusability—when your job is done, simply fill in the drilled hole if necessary and reuse at your new desired location

Toggle Anchors

- Popular removable bolt anchor due to the portable and re-usable design.
- Concrete anchorage connector can be used in variety of fall protection applications
- Breaking strength: 5,000 lbf/22kN
- Meets **ANSI Z359.18** and applicable **OSHA** standards

TANK TROLLEY™

The PeakWorks Fall Protection Tank Trolley™ is designed for use on water and fuel storage tanks. The Tank Trolley™ provides a 5,000 lbs. anchorage as required by OSHA and ANSI standards. The Tank Trolley simply rides on the top lip of the storage tank and can be used with a standard lanyard or self-retracting lifeline.

- Standards Compliance: Materials meet **OSHA 1926.5 subpart M, 1910.66 app. C,** and **ANSI A10.14.**
- Trolley: Rollers 1/4" steel, powder coated finish with forged steel O-ring attachment, polyurethane composite material
- Capacity: Application 310 lb. designed working load
- **TROLLEY6:** Storage tanks with minimum 10' diameter, fits 1/4" to 1" flange widths
- **TROLLEY6A:** Storage tanks with minimum 10' diameter, fits 1" to 1-7/8" flange widths
- Made in USA

Meet the new OSHA Residential Construction Regulation.

- PeakWorks' Roofer's Kit Fall Protection System includes an adjustable full body harness with grommeted leg straps, a rope grab with integral shock absorber, reusable roof anchor bracket, and a waterproof bucket
- The three-point adjustable full body harness features grommeted leg strap buckles and polyester webbing for lightweight comfort and dependability
- The vertical lifeline is specifically designed from high-strength polysteel rope
- The manual rope grab includes an integral 3' shock-absorbing lanyard with a double-locking snap hook
- The reusable roof anchor bracket includes an attachment D-ring.

All system components meet or exceed applicable **ANSI** and **OSHA** standards.

V8252366 Front
Model 4400-BA1CKTS

V8252366 Back
Model 4400-BA1CKTS

The PeakWorks® Compliance Kit includes an all-in-one harness and shock-absorbing lanyard. The full-body harness features three points of adjustment for ultra-lightweight comfort. Quick-connect pass-thru buckles, located on the chest and legs, make it easy for donning. All of the PeakWorks harnesses include fall indicators for ease of inspection and two lanyard parks for easy and safe storage. The shock-absorbing lanyard is certified to the newest ANSI standards. The shock-absorbing lanyard is permanently attached to the rear dorsal D-ring for simplicity. The lanyard is comprised of "tear webbing", which will significantly limit and reduce the force of a fall on a worker.

PEAKWORKS CONFINED SPACE KITS—
LIGHTWEIGHT • DURABLE • SAFETY

CONFINED SPACE KITS—COMPLETE KITS

- The PeakWorks engineering team has developed a unique tripod with distinct advantages over the competition
- The PeakWorks TR-100 Tripod offers a built-in pulley system that is located above the head assembly
- The placement of this pulley situates the wire rope cable directly over the center point of the tripod for superior perfect operator balance
- Locating the pulley system above the head assembly also allows the operator increased head room over traditional "below-the-head" pulley systems
- The PeakWorks TR-100 features adjustable aluminum legs complete with swivel steel feet and non-slip rubber bases
- The TR-100 can be used with a 65' (20m) Man-Rated Winch (MW-65G) or, by attaching the tripod mounting bracket, with a PeakWorks SRL-53303 60' (18m) or 108' (33m) recovery style SRL
- 7' (2.1m) tripod features adjustable locking legs, two additional anchorage points, non-slip safety feet and safety chain
- MW-65G man winch features 65' (20m) galvanized cable with swivel hook, 300 lb. (135kg) capacity
- 310 lb. (141kg) capacity (combined weight of person, tools, clothing, etc.)
- Meets or exceeds **CSA Z259.15** and **ANSI Z359.18** and **OSHA** requirements

CONFINED SPACE KITS—REPLACEMENT COMPONENTS

Confined Space Tripod Systems are commonly used for fall arrest, rescue/retrieval, and material handling. Common applications for the PeakWorks confined space system include difficult to access areas such as manholes, sewer systems, tanks, pits, crawl spaces and silos.

Quick note: When using a confined space system, do not use the 3-way SRL as a primary means to lower or retrieve personnel or material. A man winch should be used instead and the 3-way SRL should be used as a secondary fall arrest system.

PeakWorks recommends the use of a confined space yoke in combination with a Class AE full-body harness when lifting or lowering personnel in to a confined space.

RESCUE PRODUCT KITS

- OSHA requires that all employers meet the requirement for prompt rescue including personal escape, self rescue, and assisted rescue before employees work at heights.
- As time is critical when responding to a worker in need, it is incumbent upon all job sites to have the right equipment and proper training available in case of an emergency.
- PeakWorks offers a wide range of equipment and training to help you develop the rescue system required for your specific application.
- Contact your representative for details.

Third Party Certification

Res-Q-Pole

- The PeakWorks Res-Q-Pole with Res-Q-Head is an innovative and effective solution designed to remotely connect a carabiner to a fallen worker or anchor.
- The pole is a strong yet lightweight fibreglass-constructed telescoping pole that reaches from 6' to 12' (1.8 to 3.7m).
- A lightweight bracket holds the carabiner open until the operator hooks onto the victim's D-ring or anchor and pulls back. At that point, the carabiner is released from the head and snaps shut.
- Designed for use with the CP-03015-1 carabiner (sold separately).

Res-Q-Kit

- The Res-Q-Kit is a unique 4:1 100' (30.4m) raise and lower kit; it allows a person to be lowered using friction or raised by using a mechanical one-directional pulley.
- The Res-Q-Kit is our most effective retrieval kit.

About Confined Space

A confined space is an area, other than an underground working, that:

- is enclosed or partially enclosed;
- is not designed or intended for continuous human occupancy;
- has limited or restricted means for entry or exit that may complicate the provision of first aid, evacuation, rescue or other emergency response or service;
- is large enough and so configured that a worker could enter to perform assigned work

Confined space has limited openings for entry and exit. Examples would be spaces such as: silos, vats, ship holds, sewers, tunnels, large pipelines and other such spaces that humans could enter to perform work.

CONFINED SPACE AND RESCUE KITS

Davit Systems

Davit systems are a permanent or temporary solution for confined space where a traditional tripod does not meet your needs. PeakWorks' davit system offers numerous configurations to suit an application.

Davit system includes:

- Davit V845534060, 3-way SRL-R rescue, and V845179065 man/material winch.
- Lightweight and portable
- High strength construction
- Easy, fast set up
- Man-rated for work positioning, confined space entry/retrieval, rescue, fall protection and material handling
- Rated for working load limit of one person (310 lbs capacity including clothing, tools and equipment)
- Legs can be adjusted to extend up to 6', 75" entry point.
- Reach 28"
- Height 84"
- Weight 89 lbs. (includes weight of 3-way SRL and winch)

Standards compliance:

- Work Positioning: **OSHA 29 CFR 1926, subpart L**
- Rescue: **ANSI Z359.4**
- Confined Space: **OSHA 1910.146, ANSI Z117.1**

LADDER SAFETY SYSTEM

CABLE LADDER SYSTEM SHOWN

LADDER SAFETY SYSTEM

What's Changed for Fixed Ladders Under OSHA 1910 Walking-Working Surface Standard?

Fixed ladders provide stability when ascending to an elevated work surface because they are fastened to a building or a secure surface. In the past, OSHA has required cages for ladders taller than 20 feet, but as of November 19, 2018, fall protection is required on ladders taller than or that extend beyond 24 feet. Several of the important changes are listed below.

- **New height requirement.** Fall protection is required on ladders taller than or that extend beyond 24 feet.
- **New equipment specification.** As of November 19, 2018, cages are no longer considered compliant fall protection in newly-installed ladders. To meet OSHA standards, a personal fall arrest system or a ladder safety system is required.
- **Repair/replacement specifications.** As of November 19, 2018, a personal fall arrest ladder system or ladder safety system will be used to replace any damaged or nonfunctioning section, cage, or well that was previously installed on a fixed ladder.
- **Need more information?** For a more detailed explanation of OSHA 1910, visit www.osha.gov/walking-working-surfaces.

PeakWorks® offers two different ladder safety systems that meet or exceed the new regulations:

- **Fixed Rail System**
- **Cable System**

LADDER SAFETY SYSTEM—CABLE

PeakWorks® vertical cable ladder systems are designed for hands-free movement and 100% protection. The system consists of a top and bottom bracket, and a cable that is attached to these brackets at both ends. The cable grab connects the worker to the system and provides a hands-free climb without ever having to manipulate the cable grab. For longer systems, PeakWorks® provides intermediate brackets to minimize the vibration of the system.

Systems come in standard lengths of 30', 50', 100', and 200' which are in stock and can be customized for exact requirements.

Features:

- Fewer parts allow for simple installation and inspection
- Pre-swaged cable termination; 7x19 high-strength galvanized 3/8" steel cable provides simple and easy installation and low maintenance
- System designed for ladder rung installation only; contact SureWerx for climb extension and removable extension options coming soon
- Designed working load is 310 lbs.
- Standards Compliance: **ANSI A10.14, OSHA 1910.66, 1926.500**

ORDERING NO.	Cable Length	Guides Included
V865420	**30' Cable Ladder Safety System**	0
V865423	**50' Cable Ladder Safety System**	1

LADDER SAFETY SYSTEM—CABLE

CableGrab™

The CableGrab™ is a detachable sliding device which moves freely up or down hands free on the 3/8" galvanized steel cable. When the upward force is removed, the CableGrab device automatically locks at any point on the cable. The instantaneous locking is achieved through an effective cam-locking system. The system includes a double-locking carabiner which is to be used when securing the CableGrab™ device to the climber's full body harness.

- The CableGrab™ glides freely up or down the cable as the worker climbs
- Dual independent cams designed to immediately lock on to the cable and arrest the fall. The CableGrab™ will remain locked until the worker can step back onto the ladder or be rescued
- Easy to install and detach anywhere along the cable
- Intended for use on 3/8" diameter solid core cable system
- Intended for use with a 2" self-locking carabiner and attached to a front D-ring full-body harness
- Maximum length of the connector to the wire grab from the harness should not exceed 9'
- 2.75 lbs lightweight construction

LADDER SAFETY SYSTEM—RAIL

2000 Series Climb-Rite® Fixed Rail Ladder Safety System

The Climb-Rite® fixed rigid rail ladder system offers workers 100% fall protection when climbing permanent ladders. Each are custom designed by our in-house engineering staff to provide the right solution for your needs. The system works by bringing four hardened steel brakes into contact with the rail as soon as a fall is detected. Using a detachable sliding sleeve that rolls freely up and down the rail, the Climb-Rite® system can be used both above and below ground, and on interior or exterior surfaces.

100% Fall Protection for Fixed Ladders

The complete climbing system includes the Climb-Rite® device, 10' rail sections, rail splices, rail stops, parking pins, and rung clamps. The system has been designed without rail notches or serrations that can corrode or rust. Rail extensions and unique SkySwivel™ rotation device are available for safe ladder access and egress.

Features:

- System glides effortlessly, allowing hands-free movement up and down the ladder
- Easy to install, remove, and maintain
- Climbing device weighs only 2 lbs.
- All ladder hardware is corrosion-resistant stainless steel
- Type 316 stainless steel rail is available for marine or other corrosive environments
- Can be mounted to side or center of ladder
- Ladder extensions available
- Accommodates multiple workers
- Easy to order complete kits and simple installation kits
- Meets OSHA and ANSI standards

Rail Splice Plate

- Rail splice plate for the Climb-Rite® ladder climbing system
- Weighs 1.56 lbs.
- Made of 304 series stainless steel
- Includes stainless steel hardware
- Complies to **OSHA 1910.27 & 1926.1053**
- Complies to **ANSI A10.14**

PART NO.	Material
V8651203	304 Stainless Steel

Removable Ladder Extension—Top

Permanent Ladder Extension

- Stainless fixed ladder extension for the Climb-Rite® Ladder climbing system
- Weighs approximately 10 lbs.
- Made of 316 series stainless steel or 304 series stainless steel
- Connects to ladder with two rung clamps
- Complies to **OSHA 1910.27 & 1926.1053** for Ladder Safety Devices
- Complies to **ANSI A14.3 (1992)** Fixed Ladder Safety Standard

PART NO.	Dimensions	Material
V8651153	66" long	304 Stainless Steel
V8651154	66" long	316 Stainless Steel

Bottom

Removable Ladder Extension Kit

- Allows the Climb-Rite® System to extend above the ladder
- Includes top and bottom portion of removable ladder for the Climb-Rite® ladder climbing system
- Weighs approximately 20 lbs.
- Complies to **OSHA 1910.27 & 1926.1053** for Ladder Safety Devices
- Complies to **ANSI A14.3 (1992)** Fixed Ladder Safety Standard

PART NO.	Dimensions	Material
V8651161	2" wide x 66" long	316 Stainless Steel
V8651160	2" wide x 66" long	304 Stainless Steel

LADDER SAFETY SYSTEM—RAIL

Ladder Rung Clamp

- Attachment hardware to connect PeakWorks ladder safety systems to ladder rungs
- Weighs .4 to .68 lbs.
- Made of 316 series stainless steel
- Rung clamps also available for other shapes and sizes; contact SureWerx
- Complies to **OSHA 1910.27** & **1926.1053** for Ladder Safety Devices
- Complies to **ANSI A14.3 (1992)** Fixed Ladder Safety Standard

EMERGENCY DESCENT SYSTEMS

ESCAPE-RITE® SYSTEM SHOWN

EMERGENCY DESCENT SYSTEMS

Escape-Rite® Series

PeakWorks' Escape-Rite® is an emergency controlled descent device that has been trusted in the field for decades. The Escape-Rite® device helps employers meet the OSHA requirement for prompt rescue including personal escape, self-rescue and assisted rescue. It is compact, lightweight, and very simple to use. Its bi-directional design provides the capability for more users to evacuate in a short period of time. As a descent is initiated, the other end of the rope ascends, making it ready for another rescue automatically. Available in two descent rate options of 3' or 6' per second, depending on the height and number of users needed to evacuate. Angled descent packages are available for approved applications ranging from 45 to 90 degrees.

- Unit Dimensions: 18" x 9.75" x 8"
- Maximum Working Load: 400 lbs. (181 kg)—one person descent at a time
- Weight: Unit w/ spool: 12.25 lbs. Cable: .06 lb./ft.
- Made in USA

PRODUCT NO.	MODEL NO.	Description	System Lengths	User Weight Capcity
V85531-XX	**1003-DEVXXX**	Escape-Rite descent rate approx. 3'/s (0.91m/s)	**10'–300'** (3m to 91.4m)	400 lbs. (181kg), one person descent at a time
V85532-XX	**1006-DEVXXX**	Escape-Rite descent rate approx. 6'/s (1.83m/s)	**10'–300'** (3m to 91.4m)	400 lbs. (181kg), one person descent at a time

-XXX denotes the length of the system

V85531-XX
1003-DEVXXX

Escape-Rite Applications

- Ski lift rescue
- Portable rescue
- High-rise buildings
- Overhead crane cabs
- Offshore oil rig platforms
- Scaffolds

PeakWorks Advantage

- Fully automatic controlled descent
- Complete system, simple to use
- No power source or special skills required to operate

ENGINEERED SYSTEMS

Permanent Horizontal Lifelines

Permacable® Systems

The PeakWorks Permacable® system is pre-engineered, synthetic cable designed for horizontal lifeline applications. It is lightweight, strong, and has an excellent resistance to weather and chemicals. The synthetic cable reduces the forces transferred to the anchorage. Permacable® meets all recommended OSHA requirements for horizontal lifelines and can span up to 200' without intermediate supports, unlike traditional steel cable which require supports every 30' to 50'. It can support up to two workers at a time. A special red inspection liner in the cable alerts the user to wear or damage.

- Lightweight; only 15 lbs. per 100'
- Strong tensile strength 16,000 lbs.
- Spans up to 200' between anchorage and weighs only 15 lbs. per 100'
- Low anchorage points forces
- Low sag
- High chemical and wear resistance
- Adjustable length allows for use in permanent or semi-permanent applications.
- Special red liner alerts user to wear or damage. Allows up to four workers.
- Variety of prefabricated anchor points, posts and inverted L's are available.
- Meets **OSHA 1910.66, 1926 subpart M**
- Made in the USA

Temp HLL (Temporary Horizontal Lifeline)

Temporary, polyester rope horizontal lifeline system with bucket storage

Features

- Temporary, polyester rope horizontal lifeline that is ideal for electrical, built-up-scaffolding, tanks, vessels and catwalks.
- Low anchorage forces
- High strength, chemical resistant polyester rope lifeline
- Quick set-up and disassembly
- Continuous protection
- Spans up to 150' for one or two workers
- Three-strand polyester rope allows easy inspection of inner fibers
- Rope vise makes tensioning easy
- One system can be used for many different spans
- Meets OSHA and ANSI standards

Specifications

- Type: Polyester Rope Horizontal Lifeline Kit
- Length: 30' to 100'
- Standards: Meets **OSHA 1910.66, 1926 subpart M**
- Made In USA

TOOL TETHERING SYSTEM

PEAKWORKS TOOL COLLAR

A Complete Tool Tethering Safety System!

- PeakWorks introduces the patented Tool Collar tool tethering system, designed to protect workers from tools dropped at height
- Developed and manufactured in Canada, the Tool Collar system offers a unique tool attachment product that provides the strongest, most secure tool anchor clamping mechanism in the market
- The high-strength HDPE clamps can be securely mounted onto a wide variety of flat, hex, and round shaped tool bodies, ensuring a powerful and positive tether anchor point
- HDPE materials work in both extreme cold and high heat applications and are very durable and long lasting
- The clamps are secured using high-strength fasteners and are easily installed and removed using the hex key wrench provided in the kit
- Unlike traditional heat-tape anchoring systems, our clamps can be reused and/or repositioned at any time—a true cost saving system
- **Bonus**—Tool Collar anchor clamps have been specially designed to prevent tools from falling through commonly used construction site grating (19-4)
- No other tool tethering program offers this added safety feature!
- All Tool Collar anchor clamps feature a strong, molded eye hole for quick attachment to/detachment from wrist or standard lanyards with built-in carabiners
- Currently there are no ANSI or CSA standards for tool tethering systems; however, all Tool Collar products were subjected to an extreme and rigorous series of tests at CSA's test lab to ensure maximum peace of mind and safety
- All Tool Collar anchor clamps are available in individual blister packs or 10-piece bulk packs (five bulk packs—50 pieces per box)

Tool Collar Round Clamp

- Designed for use with round and hex shank tool bodies
- Available in four sizes: 1/2", 5/8", 3/4" and 7/8"

PRODUCT NO.	MODEL NO.	Type	Size	Package Qty.
V8561101	TT-1000-1	Round	1/2"	1 Piece (Blister)
V8561102	TT-1000-10	Round	1/2"	10/Box, 50/Carton*
V8561201	TT-2000-1	Round	5/8"	1 Piece (Blister)
V8561202	TT-2000-10	Round	5/8"	10/Box, 50/Carton*
V8561301	TT-3000-1	Round	3/4"	1 Piece (Blister)
V8561302	TT-3000-10	Round	3/4"	10/Box, 50/Carton*
V8561401	TT-4000-1	Round	7/8"	1 Piece (Blister)
V8561402	TT-4000-10	Round	7/8"	10/Box, 50/Carton*

Tool Collar Flat Clamp

- Designed for use with wide or flat tool bodies
- Available in two sizes: 15/16" W x 5/16" H (small) and 1-15/16" W x 9/16" H (large)
- Small flat clamp fits a range of wrenches of approximately 7/16" to 1-1/4"
- Large flat clamp fits a range of larger wrenches approximately 1-1/4" to 1-7/8"

PRODUCT NO.	MODEL NO.	Type	Size	Package Qty.
V8561501	TT-5000-1	Flat	15/16" x 5/16"	1 Piece (Blister)
V8561502	TT-5000-10	Flat	15/16" x 5/16"	10/Box, 50/Carton*
V8561601	TT-6000-1	Flat	1-15/16" x 9/16"	1 Piece (Blister)
V8561602	TT-6000-10	Flat	1-15/16" x 9/16"	10/Box, 50/Carton*

Tool Collar Press Block

- Designed for use with round and hex shank tool bodies and larger tools
- Available in two sizes: 1/2" to 3/4" and 1-1/16" to 1-1/4"
- Comes with standard hex-shaped opening and includes a separate rubber insert that can be placed between the tool and the clamp for extra sizing compatibilities and increased clamping grip

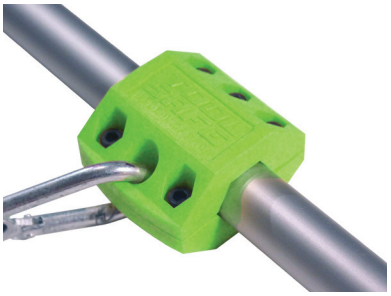
V8561801	TT-8000-1	Press block	1-1/16" to 1-1/4"	1 Piece (Blister)
V8561802	TT-8000-10	Press block	1-1/16" to 1-1/4"	10/Box, 50/Carton*



Tool Collar Lanyards

- The PeakWorks Tool Collar tethering system includes two specially designed lanyards that connect the tool anchor clamp to either the operator or to a suitable anchor point
- The wrist lanyard features a built-in heavy duty adjustable wrist collar on one end and a small carabiner on the other, conveniently tethering the tool to your wrist
- The standard lanyard features two small carabiners designed to connect to the tool anchor clamp and the other end to operator (or a suitable anchor)
- The small carabiner is designed to fit into the molded eye hole built-in to each of the Tool Collar HDPE clamps and is used to tether the tool to your body or to a suitable fixed anchor
- Both lanyards can also be used and mounted to variety of other tools in the market that feature hanging hole openings (i.e., adjustable wrenches and pipe wrenches)
- Tool Collar lanyards are designed for use with tools with a maximum weight of 15 lbs. Do not exceed this weight limitation

Tool Tether Display

Tool Tether Display

- Everything you need to get started with the new Tool Tethering System
- Designed for use on peg board or slot wall
- Modular design allows for additional merchandisers to be incorporated as needed
- 2' x 2' (70cm x 70cm) footprint that takes up less space than conventional displays
- Sets up in minutes—tool tethers, hardware, and graphics all included

OSHA REGULATIONS GOVERNING CONSTRUCTION (29 CFR PART 1926)

Subpart E covers various requirements for personal protective equipment.
Safety Belts, Lifelines and Lanyards 1926.104
Safety Nets 1926.105
Subpart L covers Scaffolds. 1926.450–454
Subpart M covers fall protection fully, including when and where fall protection systems are required and for what construction work activities. It also defines system component requirements.
Scope, Application and Definitions. 1926.500
Duty to Have Fall Protection 1926.501
Fall Protection Systems Criteria and Practices 1926.502
Training Requirements. 1926.503
Subpart X covers Ladders 1926.1053

OSHA REGULATIONS GOVERNING GENERAL INDUSTRY (29 CFR PART 1910)

Subpart D mentions a few specific Fall Protection requirements relative to walking/working surfaces.
Fixed Ladders, Ladder Safety Devices . . . . . 1910.27(d)(5)
Safety Requirements for Scaffolding, Boatswain's Chairs . . . . . 1910.28(j)(4)
Subpart F covers fall protection as it pertains to powered platforms, man lifts, and vehicle mounted work platforms.
Maintenance. 1910.66
Personal Fall Arrest Systems. 1910.66
Subpart J covers general environmental controls in which confined spaces are addressed.
Confined Spaces 1910.146
